

'+.1y'

Introduction

This document presents proofs for LilyPond 2.10.33. When the text corresponds with the shown notation, we consider LilyPond Officially BugFree (tm). This document is intended for finding bugs and for documenting bugfixes.

In the web version of this document, you can click on the file name or figure for each example to see the corresponding input file.

TODO: order of tests (file names!), test only one feature per test. Smaller and neater tests.

(left blank intentionally)

‘accidental-cautionary.ly’

Cautionary accidentals are indicated using either parentheses (default) or smaller accidentals.

‘accidental-clef-change.ly’

Accidentals are reset for clef changes.

‘accidental-collision.ly’

accidentals avoid stems of other notes too.

‘accidental-double.ly’

If two forced accidentals happen at the same time, only one sharp sign is printed.

‘accidental-forced-tie.ly’

Accidentals can be forced with ! and ? even if the notes are tied.

'accidental-ledger.ly'

Ledger lines are shortened when there are accidentals. This happens only for the single ledger line close to the note head, and only if the accidental is horizontally close to the head.

A musical staff in common time with a treble clef. The key signature is C major. The staff shows a sequence of notes with accidentals (flats and sharps) and ledger lines. The ledger lines are shortened when they are close to the note heads and contain accidentals.

'accidental-octave.ly'

This shows how accidentals in different octaves are handled. The note names are also automatically printed but the octavation has been dropped out.

A musical staff in common time with a treble clef. The key signature is C major. The staff shows a sequence of notes with accidentals (sharps). Below the staff, note names are printed under each note: gis, g, g, gis, gis, g, g, gis, g, gis, g.

A musical staff in common time with a treble clef. The key signature is C major. The staff shows a sequence of notes with accidentals (sharps). Below the staff, note names are printed under each note: fis, f, f, fis, fis, f, f, fis, f, fis, f.

'accidental-piano.ly'

In piano accidental style, notes in both staves influence each other. In this example, each note should have an accidental.

Two staves in common time. The top staff has a treble clef and the bottom staff has a bass clef. Both staves show a sequence of notes with accidentals (flats and sharps) that influence each other across the staves.

'accidental-placement.ly'

Accidentals are placed as closely as possible. Accidentals in corresponding octaves are aligned. The top accidental should be nearest to the chord. The flats in a sixth should be staggered.

A musical staff in common time with a treble clef. The key signature is C major. The staff shows a sequence of notes with accidentals (flats and sharps) that are placed as closely as possible, aligned in corresponding octaves, and staggered in a sixth chord.

'accidental-quarter.ly'

Quarter tone notation is supported, including threequarters flat.

A musical staff starting with a treble clef and a common time signature (4/4). The notes are: B-flat, A-flat, G-flat, F-flat, E-flat, D, C, B, A, A-sharp, B-sharp, C-sharp, D-sharp, E-sharp, F-sharp, G-sharp, A-double sharp.

‘accidental-single-double.ly’

A sharp sign after a double sharp sign, as well as a flat sign after a double flat sign is automatically prepended with a natural sign.

A musical staff with a treble clef. The notes are: C, x, B, #, A, x, G, #.

[‘accidental-suggestions.ly’](http://accidental-suggestions.ly)

setting the `suggestAccidentals` will print accidentals vertically relative to the note. This is useful for denoting Musica Ficta.

The image shows two measures of musical notation. The first measure is in 2/4 time with a treble clef. It has two notes, both of which are sharped. Below this measure is the word "paren". The second measure also has two notes, both of which are sharped. Below this measure is the word "no caut style". The notes are sharped according to the style indicated below them.

‘accidental-tie.ly’

The second and third notes should not get accidentals, 6 because they are tied to a note. However, an accidental is present if the line is broken at the tie, which happens for the G sharp.

A musical score for voice and piano. The vocal line starts with a forte dynamic (f) on the note C-sharp. The piano accompaniment consists of eighth-note chords. The vocal part continues with three more f dynamics on the notes D, E, and F-sharp. The piano part continues with eighth-note chords.

A musical staff with a treble clef. The first note has a sharp sign. The second note has a sharp sign and a fermata.

'accidental-unbroken-tie-spacing.ly'

Tied accidentaled notes (which cause reminder accidentals) do not wreak havoc in the spacing when unbroken.

'accidental-voice.ly'

This shows how modern cross voice auto cautionary accidentals are handled. The first two fisses get accidentals because they belong to different voices. The first f gets cautionary natural because of previous measure. The last f gets cautionary natural because fis was only in the other voice.

A musical staff in common time with a treble clef. The key signature is C major. The notes are: fis (natural), a (sharp), f (natural), fis (sharp), a (sharp). Below the staff, the notes are labeled: c, fis, f, c, f. The first fis has a sharp below it, and the second fis has a sharp above it, indicating cross voice auto cautionary accidentals.

'accidental.ly'

Accidentals work: the second note does not get a sharp. The third and fourth show forced and courtesy accidentals.

A musical staff in common time with a treble clef. The key signature is C major. The notes are: c (sharp), dis (double sharp), dis (double sharp), dis (sharp), dis (sharp). Below the staff, the notes are labeled: dis, dis, dis, dis. The first dis has a double sharp below it, and the second dis has a sharp below it, indicating forced and courtesy accidentals.

'accidentals-modern.ly'

In 'modern' accidental style, the last note should have an accidental sign.

A musical staff in common time with a treble clef. The key signature is C major. The notes are: c, sharp, sharp, natural. Above the staff, the text 'this should have accidental' is written next to the second sharp note.

'alignment-order.ly'

Newly created contexts can be inserted anywhere in the vertical alignment.

A musical staff in common time with a treble clef. The notes are: c, c, c. The staff is divided into three sections with labels: 'below first staff' (top section), 'this abovestaff' (middle section), and 'staff last' (bottom section). A bracket above the middle section is labeled '6'.

'alignment-vertical-manual-setting.ly'

Alignments may be changed pre system by setting `alignment-offsets` in the `line-break-system-details` property

A vertical stack of three staves of musical notation. Each staff begins with a treble clef and five horizontal lines.

- Top Staff:** Contains three eighth-note heads. The first note is positioned above the second line, and the second note is positioned below the fourth line. The measure number "3" is located at the top left of the staff.
- Middle Staff:** Contains three eighth-note heads. The first note is positioned above the third line, and the second note is positioned below the fifth line. The measure number "2" is located at the top left of the staff.
- Bottom Staff:** Contains three eighth-note heads. The first note is positioned above the second line, and the second note is positioned below the fourth line. The measure number "3" is located at the top left of the staff.

'alignment-vertical-spacing.ly'

By setting properties in `NonMusicalPaperColumn`, vertical spacing of alignments can be adjusted per system.

By setting `alignment-extra-space` or `fixed-alignment-extra-space` an individual system may be stretched vertically.

For technical reasons, `overrideProperty` has to be used for setting properties on individual object. `\override` in a `\context` block may still be used for global overrides.

A musical score for piano. It consists of three staves, each starting with a treble clef. The first two staves are aligned normally, with note heads positioned directly above their stems. The third staff, labeled "pn" (piano), has a significantly larger vertical space between the note heads and the stems, demonstrating the effect of `fixed-alignment-extra-space`.

A musical score for piano. It consists of three staves, each starting with a treble clef. The first two staves are aligned normally. The third staff, labeled "pn" (piano), has a significantly larger vertical space between the note heads and the stems, demonstrating the effect of `fixed-alignment-extra-space`.

A musical score for piano. It consists of three staves, each starting with a treble clef. The first two staves are aligned normally. The third staff, labeled "pn" (piano), has a significantly larger vertical space between the note heads and the stems, demonstrating the effect of `fixed-alignment-extra-space`.

'ambitus.ly'

Ambitususes indicate pitch ranges for voices.

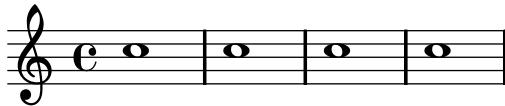

Accidentals only show up if they're not part of key signature. `AmbitusNoteHead` grobs also have ledger lines.

A musical score consisting of two staves. The top staff is in G major (no sharps or flats) and the bottom staff is in F# major (two sharps). Both staves show ledger lines extending from the note heads, indicating the ambitus range. This demonstrates how accidentals are handled outside the key signature's context.

'apply-context.ly'

With `\applyContext`, `\properties` can be modified procedurally. Applications include: checking bar numbers, smart octavation.

This example prints a bar-number during processing on stdout.

'apply-output.ly'

The `\applyOutput` expression is the most flexible way to tune properties for individual grobs. Here, the layout of a note head is changed depending on its vertical position.

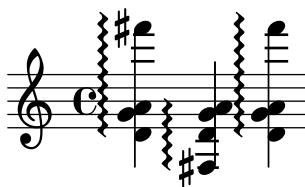

'arpeggio-bracket.ly'

A square bracket on the left indicates that the player should not arpeggiate the chord.

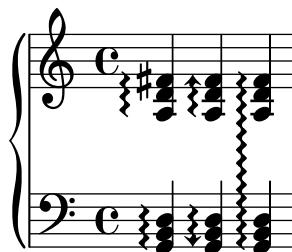

'arpeggio-collision.ly'

Arpeggio stays clear of accidentals and flipped note heads.

'arpeggio.ly'

Arpeggios are supported, both cross-staff and broken single staff.

`'auto-beam-bar.ly'`

No auto beams will be put over (manual) repeat bars.

`'auto-beam-beaming-override.ly'`

Autobeamer remembers `subdivideBeams` and other beaming pattern related functions at the start of an autobeam.

`'auto-beam-no-beam.ly'`

The autobeamer may be switched off for a single note with `\noBeam`.

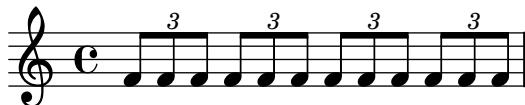

`'auto-beam-triplet.ly'`

Automatic beaming is also done on tuplets.

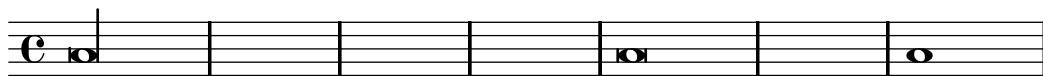

`'auto-beam-tuplets.ly'`

Tuplet-spanner should not put (visible) brackets on beams even if they're auto generated.

`'auto-beam.ly'`

Beams are place automatically; the last measure should have a single beam.

8

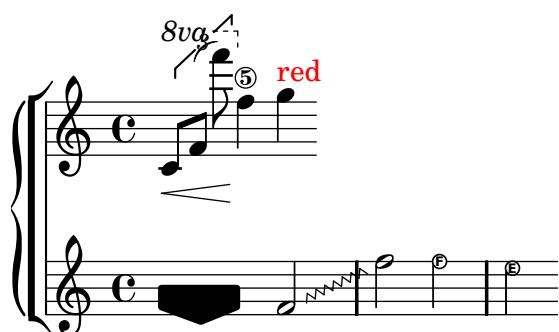

'auto-change.ly'

Auto change piano staff switches voices between up and down staves automatically rests are switched along with the coming note. When central C is reached, staff is not yet switched (by default).

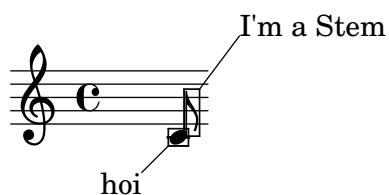

'backend-exercise.ly'

Excercise all output functions

'balloon.ly'

With balloon texts, objects in the output can be marked, with lines and explanatory text added.

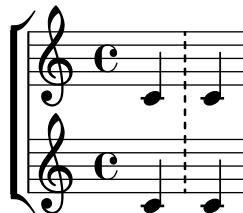

'bar-check-redefine.ly'

The meaning of | is stored in the identifier pipeSymbol.

`'bar-line-dashed.ly'`

The dashes in a dashed bar line covers staff lines exactly. Dashed barlines between staves start and end on a half dash precisely.

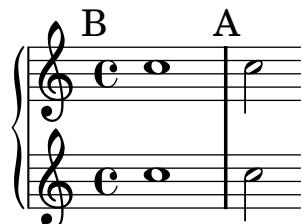

`'bar-number.ly'`

Bar number may be set and their padding adjusted individually. The counting of bar numbers is started after the anacrusis.

To prevent clashes at the beginning of a line, the padding may have to be increased.

`'bar-scripts.ly'`

Markings can be attached to (invisible) barlines.

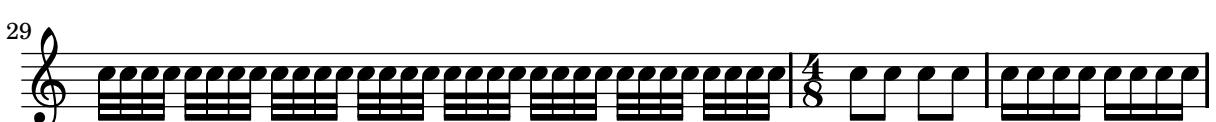

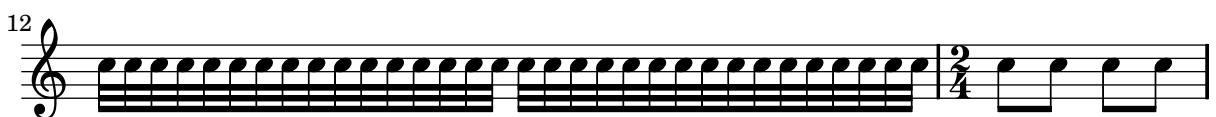

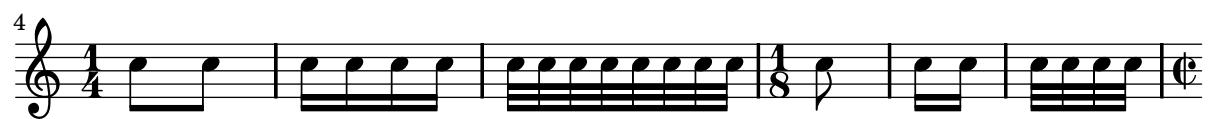

`'beam-auto-knee.ly'`

A knee is made automatically when a horizontal beam fits in a gap between note heads that is larger than a predefined threshold.

`'beam-auto.ly'`

There are presets for the `auto-beam` engraver in the case of common time signatures.

35

'beam-beamlet-grace.ly'

Beamlets in grace notes remain readable.

'beam-beat-grouping.ly'

Beaming patterns obey the `beatGrouping` property.

(2+3) (3+2)

'beam-break.ly'

Beams can be printed across line breaks, if forced.

'beam-center-slope.ly'

Simple beams on middle staffline are allowed to be slightly sloped, even if the notes have ledgers. Beams reaching beyond middle line can have bigger slope.

small slope

bigger slope

'beam-concave-damped.ly'

Beams that are not strictly concave are damped according to their concaveness.

'beam-concave.ly'

Fully concave beams should be horizontal. Informally spoken, concave refers to the shape of the notes that are opposite a beam. If an up-beam has high notes on its center stems, then we call it concave.

If a beam fails a test, the desired slope is printed next to it.

The image shows four musical staves from a score. Staff 1 (measures 1-6) shows a series of eighth-note pairs connected by horizontal beams. Staff 2 (measures 7-12) shows eighth-note pairs with one note higher than the other, creating a slight upward slope. Staff 3 (measures 13-18) shows eighth-note pairs with one note lower than the other, creating a slight downward slope. Staff 4 (measures 19-24) shows eighth-note pairs with one note significantly higher than the other, creating a very extreme upward slope.

'beam-cross-staff-auto-knee.ly'

Automatic cross-staff knees work also (here they were produced with explicit staff switches).

A musical staff with two staves: treble clef on top and bass clef on bottom. The top staff has a 'C' key signature. The bottom staff has a 'C' key signature. A vertical brace connects the two staves. In the first measure, there are two eighth notes in the treble staff. In the second measure, there are two eighth notes in the bass staff. A bracket labeled 'no knee' points to the second measure, indicating that no cross-staff knee was generated.

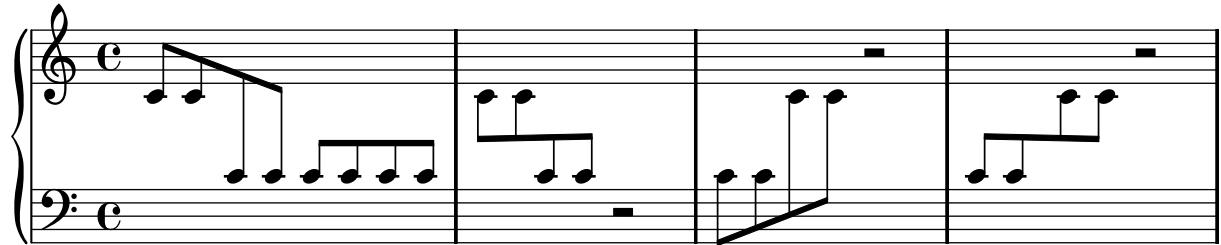

'beam-cross-staff-slope.ly'

Cross staff (kneed) beams do not cause extreme slopes.

A musical staff with two staves: treble clef on top and bass clef on bottom. The top staff has a 'G' key signature. The bottom staff has a 'G' key signature. A vertical brace connects the two staves. In the first measure, there are two eighth notes in the treble staff connected by a beam. In the second measure, there are two eighth notes in the bass staff connected by a beam. In the third measure, there is a single eighth note in the treble staff connected by a beam. The beams are relatively straight, demonstrating that extreme slopes are avoided.

`'beam-cross-staff.ly'`

Beams can be typeset over fixed distance aligned staves, beam beautification does not really work, but knees do. Beams should be behave well, wherever the switching point is.

`'beam-damp.ly'`

Beams are less steep than the notes they encompass.

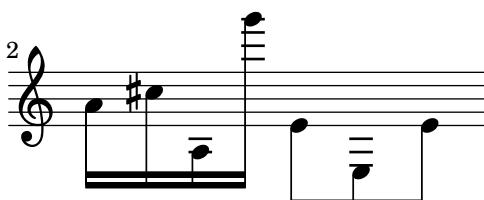

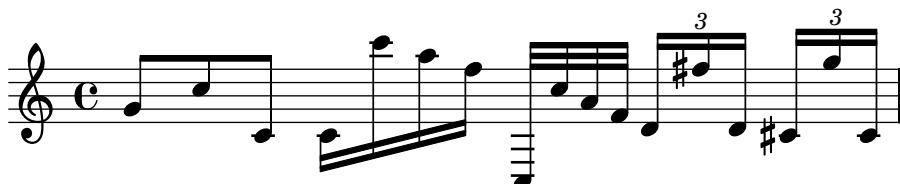

`'beam-default-lengths.ly'`

Beamed stems have standard lengths if possible. Quantization is switched off in this example.

`'beam-extreme.ly'`

Beams should behave reasonably well, even under extreme circumstances. Stems may be short, but noteheads should never touch the beam. Note that under normal circumstances, these beams would get knees here `Beam.auto-knee-gap` was set to false.

`'beam-feather.ly'`

Specifying `grow-direction` on a beam, will cause feathered beaming. The `\featherDurations` function can be used to adjust note durations.

`'beam-french.ly'`

In french style beaming, the stems do not go between beams.

`'beam-funky-beamlet.ly'`

Funky kneeled beams with beamlets also work. The beamlets should be pointing to the note head.

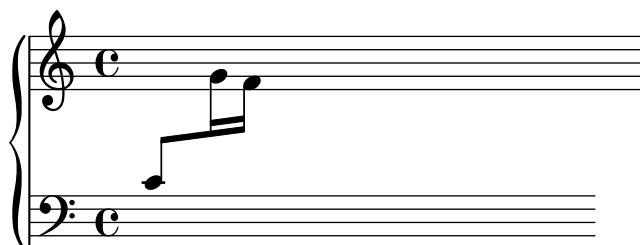

`'beam-funky.ly'`

In complex configurations of knee beaming, according to Paul Roberts, the first stem of a beam determines the direction of the beam, and as such the way that following (kneed) stems attach to the beam. This is in disagreement with the current algorithm.

`'beam-isknee.ly'`

Beams can be placed across a `PianoStaff`.

`'beam-knee-symmetry.ly'`

Point-symmetric beams should receive the same quantizing. There is no up/down bias in the quantizing code.

`'beam-length.ly'`

Beams should look the same.

`'beam-manual-beaming.ly'`

Beaming can be overridden for individual stems.

`'beam-multiple-cross-staff.ly'`

Kneed beams (often happens with cross-staff beams) should look good when there are multiple beams: all the beams should go on continuously at the staff change. Stems in both staves reach up to the last beam.

A musical score consisting of two staves. The top staff is in common time (C) with a treble clef, and the bottom staff is in common time (C) with a bass clef. Both staves have vertical bar lines. The music consists of eighth notes. Beams connect notes across the staff change, ensuring a smooth transition between the two staves.

`'beam-outside-beamlets.ly'`

Beams may overshoot stems. This is also controlled with `break-overshoot`.

`'beam-over-barline.ly'`

Explicit beams may cross barlines.

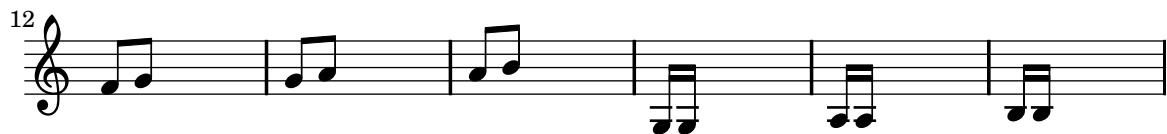

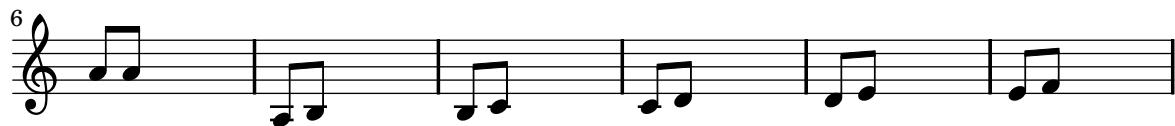

`'beam-position.ly'`

Beams on ledgered notes should always reach the middle staff line. The second beam counting from the note head side, should never be lower than the second staff line. This does not hold for grace note beams. Override with `no-stem-extend`.

`'beam-quant-standard.ly'`

This file tests a few standard beam quants, taken from Ted Ross' book. If LilyPond finds another quant, the correct quant is printed over the beam.

'beam-quanting-32nd.ly'

Stem lengths take precedence over beam quants: ‘forbidden’ quants are only avoided for 32nd beams when they are outside of the staff. However, that leads to very long stems, which is even worse.

'beam-quanting-horizontal.ly'

In this test for beam quant positions for horizontal beams, staff lines should be covered in all cases. For 32nd beams, the free stem lengths are between 2 and 1.5.

'beam-quarter.ly'

Quarter notes may be beamed: the beam is halted momentarily.

'beam-rest.ly'

The number of beams does not change on a rest.

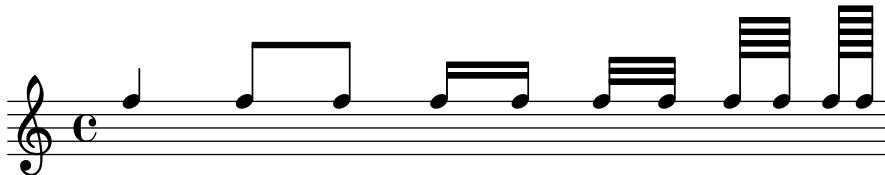

'beam-second.ly'

Engraving second intervals is tricky. We used to have problems with seconds being too steep, or getting too long stems. In a file like this, showing seconds, you’ll spot something fishy very quickly.

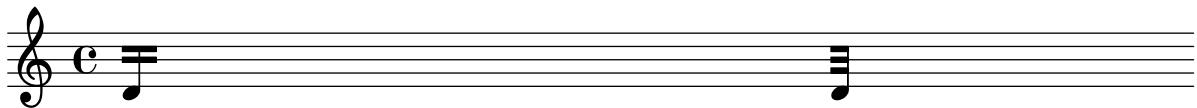

`'beam-shortened-lengths.ly'`

Beams in unnatural direction, have shortened stems, but do not look too short.

`'beam-single-stem.ly'`

Single stem beams are also allowed. For such beams, clip-edges is switched off automatically.

`'beam-slope-stemlet.ly'`

For slope calculations, stemlets are treated as invisible stems.

`'beam-unconnected-beamlets.ly'`

By setting `max-beam-connect`, it is possible to create pairs of unconnected beamlets.

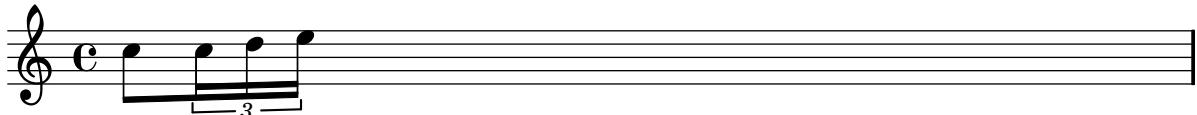

`'beaming-ternary-metrum.ly'`

Automatic beaming works also in ternary time sigs. In this case, the 8th is a beat, so the 16ths are split into two groups. This can be avoided by overriding `beatLength` to be 3 8th notes.

`'beaming.ly'`

Beaming is generated automatically. Beams may cross bar lines. In that case, line breaks are forbidden.

over barline

'beams.ly'

Beaming can be also given explicitly.

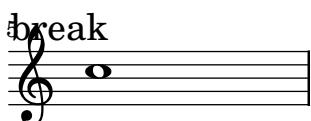

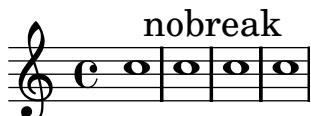

'bend-after.ly'

Falls and doits can be created with bendAfter. They run to the next note, or to the next barline.

'break.ly'

Breaks can be encouraged and discouraged using \break and \noBreak.

'breathing-sign-ancient.ly'

Gregorian chant notation sometimes also uses commas and ticks, but in smaller font size (we call it 'virgula' and 'caesura'). However, the most common breathing signs are divisio minima/maior/maxima and finalis, the latter three looking similar to bar glyphs.

‘breathing-sign.ly’

Breathing signs are available in different tastes: commas (default), ticks, vees and ‘railroad tracks’ (caesura).

‘chord-changes.ly’

Property `chordChanges`: display chord names only when there’s a change in the chords scheme, but always display the chord name after a line break.

Cm

A musical staff in common time with a key signature of one flat. It shows a C major chord (C-E-G) with a flat sign below the staff.

Cm D Cm

A musical staff in common time with a key signature of one flat. It shows a sequence of chords: C major (C-E-G), D major (D-F#-A), and C major (C-E-G).

Cm D

A musical staff in common time with a key signature of one flat. It shows a sequence of chords: C major (C-E-G), D major (D-F#-A).

‘chord-name-entry-11.ly’

The 11 is only added to major-13 if it is mentioned explicitly.

A musical staff in common time with a key signature of one flat. It shows a complex chord structure consisting of multiple stacked notes, likely a major-13 chord with an explicit 11th.

‘chord-name-entry.ly’

Chords can be produced with the new chordname entry code (\chordmode mode), using a pitch and a suffix. Here, the suffixes are printed below pitches.

A musical staff in common time with a key signature of one flat. It shows a sequence of chords with their names and suffixes printed below the staff: (nothing)7, :m, :m7, :aug, :maj7, :dim, :dim7, and :sus4.

10

:sus2 :6 :m6 :7sus4 :3- :3+ :5+.3- :7 :9

19

:11 :13 :m13 :7\^{\sim}5\^{\sim}3 /g /gis /a /+f /+g

'chord-name-exceptions.ly'

The property `chordNameExceptions` can be used to store a list of special notations for specific chords.

C^{7/sus4} C⁰⁷/F C⁷wahh C⁰⁷/F

'chord-name-major7.ly'

The layout of the major 7 can be tuned with `majorSevenSymbol`.

C \triangle C^{j7}

'chord-names-bass.ly'

In Ignatzek inversions, a note is dropped down to act as the bass note of the chord. Bass note may be also added explicitly. Above the staff: computed chord names. Below staff: entered chord name.

F \triangle /E F \triangle /F F \triangle /G F \triangle /E F \triangle /F F \triangle /G

:maj7/e :maj7/f :maj7/g :maj7+/e :maj7+/f :maj7+/g

'chord-scripts.ly'

Scripts can also be attached to chord elements.

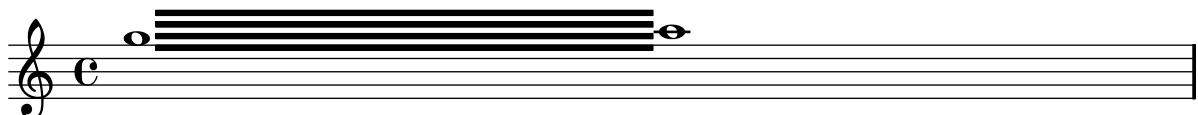

'chord-tremolo-short.ly'

Tremolo repeats can be constructed for short tremolos (total duration smaller than 1/4) too. Only some of the beams are connected to the stems.

'chord-tremolo-whole.ly'

chord tremolos don't collide with whole notes.

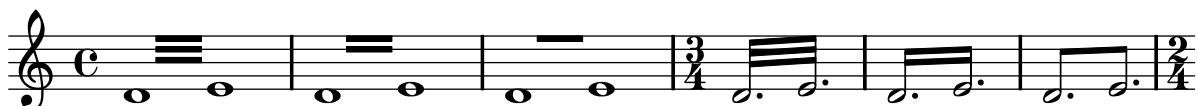

'chord-tremolo.ly'

Chord tremolos look like beams, but are a kind of repeat symbol. To avoid confusion, chord tremolo beams do not reach the stems, but leave a gap. Chord tremolo beams on half notes are not ambiguous, as half notes cannot appear in a regular beam, and should reach the stems.

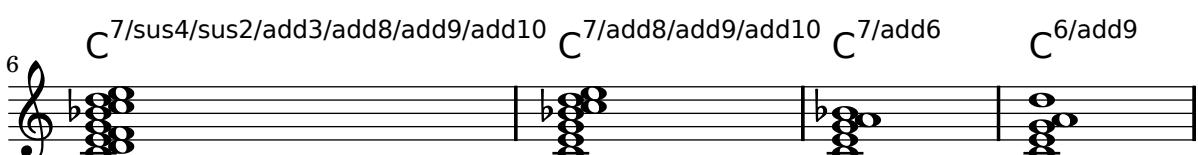

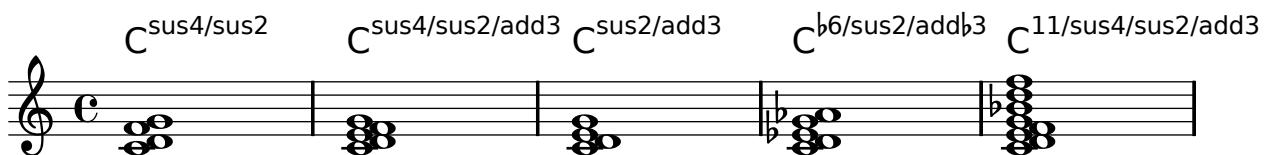

In this example, each tremolo lasts exactly one measure.

(To ensure that the spacing engine is not confused we add some regular notes as well.)

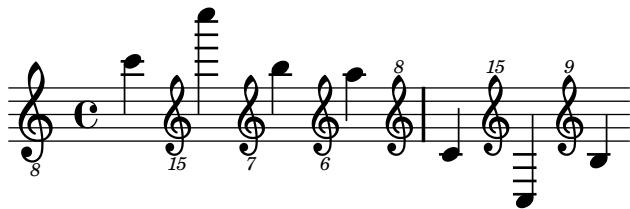

'chords-funky-ignatzek.ly'

Jazz chords may have unusual combinations.

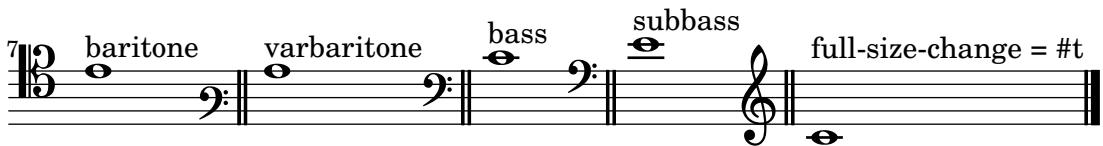

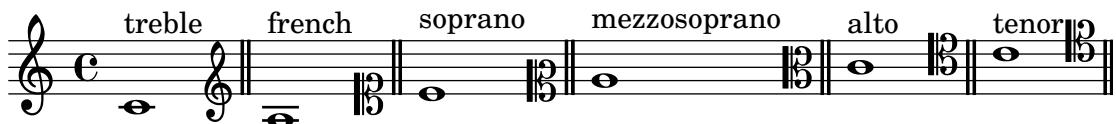

'clef-oct.ly'

Octavation signs may be added to clefs. These octavation signs may be placed below or above (meaning an octave higher or lower), and can take any value, including 15 for two octaves.

'clefs.ly'

Clefs with **full-size-change** should be typeset in full size. For octaviated clefs, the "8" should appear closely above or below the clef respectively.

'clip-systems.ly'

Clipping snippets from a finished score

Notes:

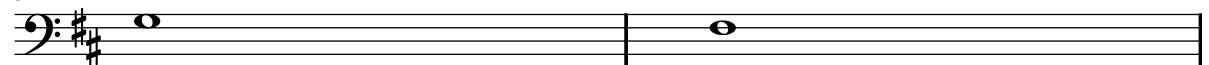

- If system starts and ends are included, they include extents of the System grob, eg. instrument names.
- Grace notes at the end point of the region are not included
- Regions can span multiple systems. In this case, multiple EPS files are generated.

This file needs to be run separately with **-dclip-systems**; the collated-files.html of the regression test does not adequately show the results.

The result will be files named '**base-from-start-to-end [-count].eps**'.

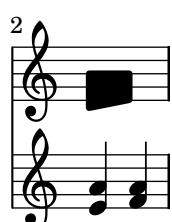

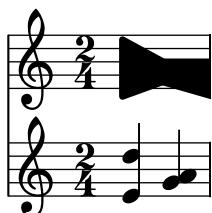

5

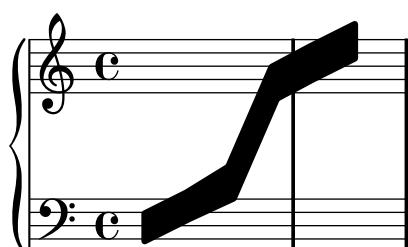

'cluster-break.ly'

Clusters behave well across line breaks.

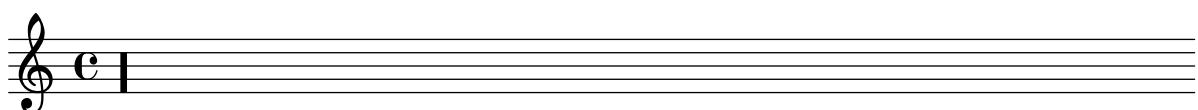

'cluster-cross-staff.ly'

Clusters can be written across staves.

'cluster-single-note.ly'

don't crash on single chord clusters.

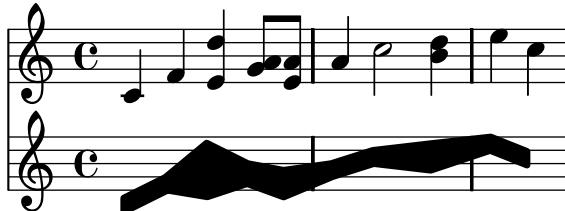

'cluster-style.ly'

Clusters behave well across line breaks.

`'cluster.ly'`

Clusters are a device to denote that a complete range of notes is to be played.

`'collision-2.ly'`

Single head notes may collide.

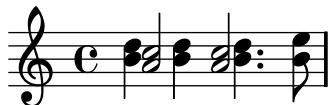

`'collision-alignment.ly'`

Notes in different staves should be aligned to the left-most note, in case of collisions.

`'collision-dots-invert.ly'`

When notes are colliding, the resolution depends on the dots: notes with dots should go to the right, if there could be confusion to which notes the dots belong.

`'collision-dots-move.ly'`

If collision resolution finds dotted note head must remain on left hand side, move dots to the right.

`'collision-dots.ly'`

Collision resolution tries to put notes with dots on the right side.

`'collision-head-chords.ly'`

Note heads in collisions should be merged if they have the same positions in the extreme note heads.

`'collision-heads.ly'`

Open and black note heads are not merged by default.

`'collision-merge-differently-dotted.ly'`

If `NoteCollision` has `merge-differently-dotted = ##t` note heads that have differing dot counts may be merged anyway. Dots should not disappear when merging similar note heads.

`'collision-merge-differently-headed.ly'`

If `merge-differently-headed` is enabled, then open note heads may be merged with black noteheads, but only if the black note heads are from 8th or shorter notes.

`'collision-merge-dots.ly'`

When merging heads, the dots are merged too.

'collision-mesh.ly'

Oppositely stemmed chords, meshing into each other, are resolved.

'collision-whole.ly'

Mixed collisions with whole notes require asymmetric shifts.

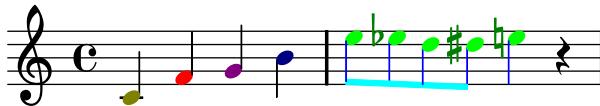

'collisions.ly'

In addition to normal collision rules, there is support for polyphony, where the collisions are avoided by shifting middle voices horizontally.

'color.ly'

Each grob can have a color assigned to it. Use the \override and \revert expressions to set the **color** property.

'completion-heads-polyphony.ly'

Completion heads are broken across bar lines. This was intended as a debugging tool, but it can be used to ease music entry. Completion heads are not fooled by polyphony with a different rhythm.

'completion-heads.ly'

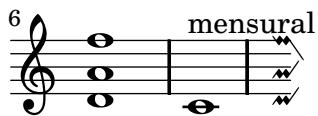

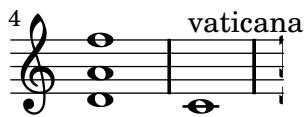

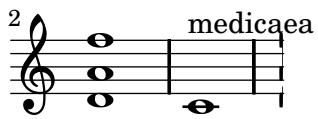

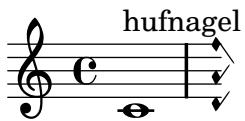

If the **Note_heads_engraver** is replaced by the **Completion_heads_engraver**, notes that cross bar lines are split into tied notes.

'custos.ly'

Custodes may be engraved in various styles.

'dot-column-rest-collision.ly'

Dot columns do not trigger beam slanting too early.

'dot-flag-collision.ly'

Dots move to the right when a collision with the (up)flag happens.

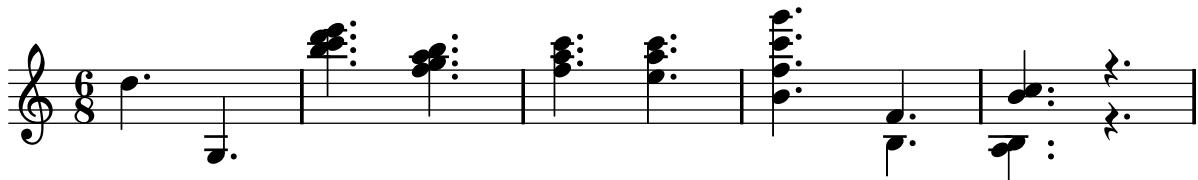

'dots.ly'

Noteheads can have dots, and rests too. Augmentation dots should never be printed on a staff line, but rather be shifted vertically. They should go up, but in case of multiple parts, the down stems have down shifted dots. In case of chords, all dots should be in a column. The dots follow the shift of rests when avoiding collisions.

The priorities to print the dots are (ranked in importance):

- keeping dots off staff lines,
- keeping dots close to their note heads,
- moving dots in the direction specified by the voice,
- moving dots up.

'drums.ly'

In drum notation, there is a special clef symbol, drums are placed to their own staff positions and have note heads according to the drum, an extra symbol may be attached to the drum, and the number of lines may be restricted.

timbales

drums

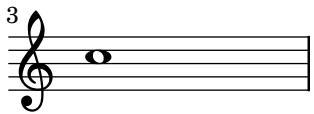

crash h.h.

3

'dynamics-broken-hairpin.ly'

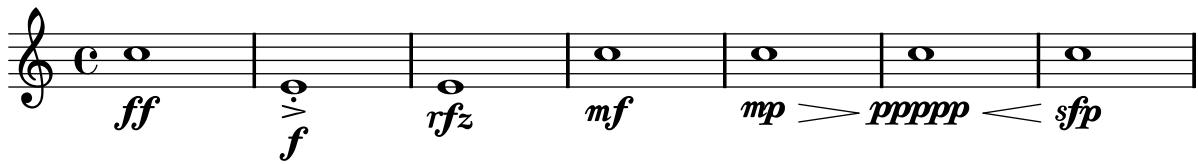

Broken crescendi should be open on one side.

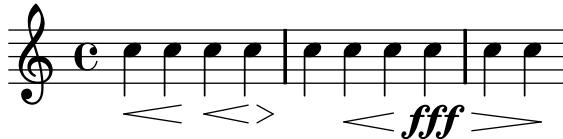

'dynamics-glyphs.ly'

Dynamic letters are kerned, and their weight matches that of the hairpin signs. The dynamic scripts should be horizontally centered on the note head. Scripts that should appear closer to the note head (staccato, accent) are reckoned with.

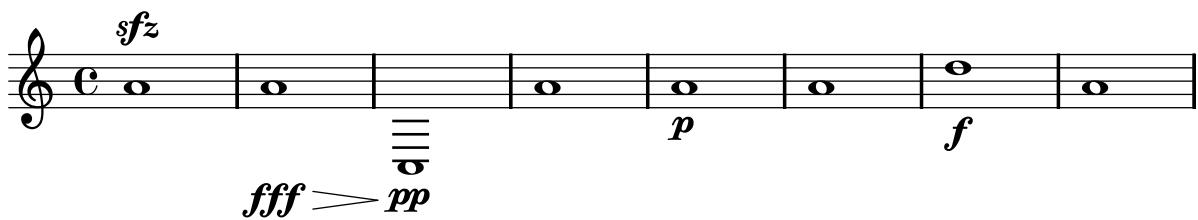

'dynamics-hairpin-length.ly'

Hairpins extend to the extremes of the bound if there is no adjacent hairpin or dynamic-text. If there is, the hairpin extends to the center of the column or the bound of the text respectively.

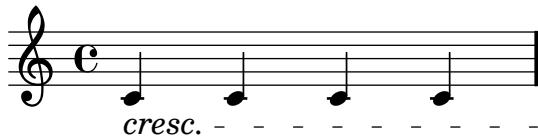

'dynamics-line.ly'

Dynamics appear below or above the staff. If multiple dynamics are linked with (de)crescendi, they should be on the same line. Isolated dynamics may be forced up or down.

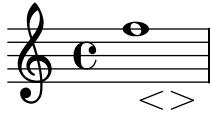

'dynamics-text-spanner-padding.ly'

The 2nd half of the cresc. stays at a reasonable distance from the notes.

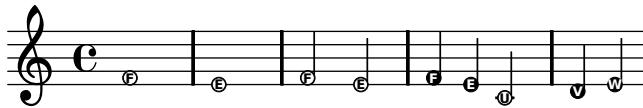

`'dynamics-unbound-hairpin.ly'`

Crescendi may start off-notes, however, they should not collapse into flat lines.

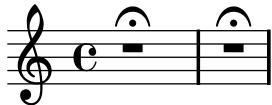

`'easy-notation.ly'`

Easy-notation (or Ez-notation) prints names in note heads. You also get ledger lines, of course.

`'fermata-rest-position.ly'`

Fermatas over multimeasure rests are positioned as over normal rests.

`'figured-bass-continuation-center.ly'`

Pairs of congruent figured bass extender lines are vertically centered if `figuredBassCenterContinuations` is set to true.

#6 6
4 3 **#6 6**
4 3 ————— **#3**

`'figured-bass-continuation-forbid.ly'`

By adorning a bass figure with `\!`, an extender may be forbidden.

4 4
—
7 b7

`'figured-bass-continuation.ly'`

Figured bass extender lines run between repeated bass figures. They are switched on with `useBassFigureExtenders`

the same with extenders

#6 6 4
4 3 **#6 6**
4 3 ————— **#3**

`'figured-bass-implicit.ly'`

Implicit bass figures are not printed, but they do get extenders.

normal extenders

implicit

`3 3 3— —`
`6 #4 6 #4 6 #4`

`'figured-bass-staff.ly'`

Figured bass can also be added to Staff context directly. In that case, the figures must be entered with `\figuremode` and be directed to an existing Staff context.

Since these engravers are on Staff level, properties controlling figured bass should be set in Staff context.

`'figured-bass.ly'`

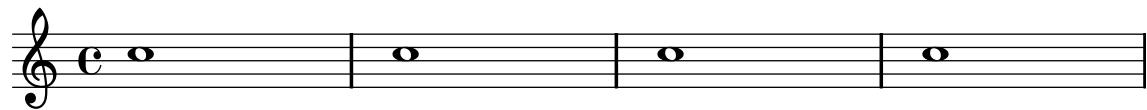

Figured bass is created by the FiguredBass context which responds to figured bass events and rest events. You must enter these using the special `\figuremode { }` mode, which allows you to type numbers, like `<4 6+>` and add slashes and pluses.

You can also enter markup strings. The vertical alignment may also be tuned.

`'fill-line-test.ly'`

The fill-line markup command should align texts in columns. For example, the characters in the center should form one column.

1													1
1													2
1													3
1			2										4
1			2										5
1		2											6
1		2											7
1		2											8
1		2											9
1		2											10
1		2											11
1		2											12
1		2											13
1	2	3	4	5	6	7	8	9	10	11	12	13	14

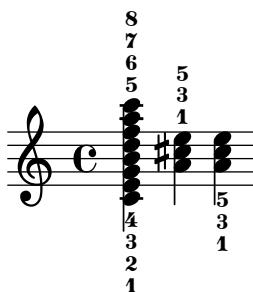

`'finger-chords-accidentally'`

Scripts left of a chord avoid accidentals.

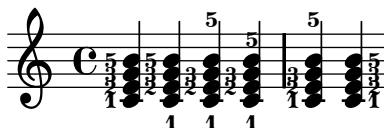

`'finger-chords-order.ly'`

Ordering of the fingerings depends on vertical ordering of the notes, and is independent of up/down direction.

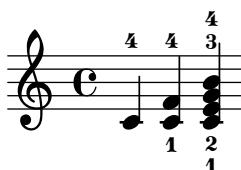

`'finger-chords.ly'`

With the new chord syntax, it is possible to associate fingerings uniquely with notes. This makes it possible to add horizontal fingerings to notes.

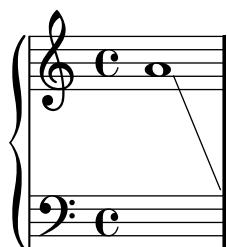

`'fingering.ly'`

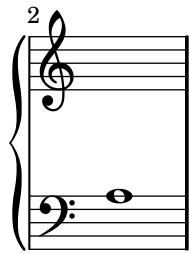

Automatic fingering tries to put fingering instructions next to noteheads.

`'follow-voice-break.ly'`

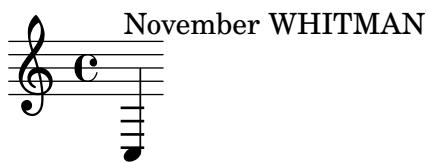

The line-spanners connects to the Y position of the note on the next line. When put across line breaks, only the part before the line break is printed.

'font-bogus-ligature.ly'

TM and No should not be changed into trademark/number symbols. This may happen with incorrect font versions.

'font-family-override.ly'

The default font families for text can be overridden with `make-pango-font-tree`

'font-kern.ly'

Text set in TrueType Fonts that contain kerning tables, are kerned.

With kerning:

VAVAVA
VAVAVA

Without kerning:

`'font-name.ly'`

Other fonts can be used by setting `font-name` for the appropriate object. The string should be a Pango font description without size specification.

Rest in LuxiMono

This text is in large Vera Bold

`'font-postscript.ly'`

This file demonstrates how to load different (postscript) fonts. The file `'font.scm'` shows how to define the scheme-function `make-century-schoolbook-tree`.

This file should be run with the TeX and extra options should be passed to LaTe \backslash X and dvips to help it find the uncb font.

`'fret-boards.ly'`

Frets can be assigned automatically. The results will be best when one string number is indicated in advance

autofrets

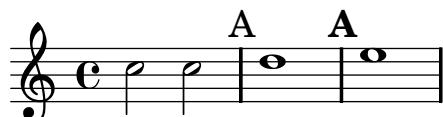

This block contains two parts. The top part shows a fretboard diagram with an 'x' at the 5th fret and 'ii' at the 7th fret. The bottom part shows a musical staff with a treble clef, a 'C' key signature, and a '3' time signature. It includes a note on the 5th string (labeled '8') and a note on the 3rd string (labeled 'x'). Below the staff is another fretboard diagram with an 'x' at the 5th fret and 'ii' at the 7th fret.

`'fret-diagrams.ly'`

A musical staff with a treble clef, a 'C' key signature, and a '3' time signature. It features five fretboard diagrams labeled 'oo', 'C', 'C', 'C', and 'D'. The first diagram ('oo') shows open strings. The second diagram has an 'x' at the 5th fret and 'iii' at the 7th fret, with fingerings '12341'. The third diagram has an 'x' at the 5th fret and '3' at the 7th fret, with fingerings '(1234)' and '(234)'. The fourth diagram has an 'x' at the 5th fret and '3' at the 7th fret, with fingerings '3(234)'. The fifth diagram has an 'x' at the 5th fret and 'oo' at the 7th fret, with fingerings '123'.

`'generic-output-property.ly'`

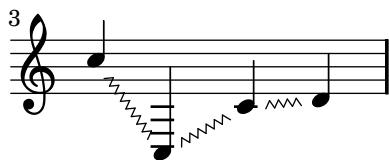

As a last resort, the placement of grobs can be adjusted manually, by setting the `extra-offset` of a grob.

`'glissando.ly'`

Between notes, there may be simple glissando lines. Here, the first two glissandi are not consecutive.

The engraver does no time-keeping, so it involves some trickery to get `<< { s8 s8 s4 } { c4 \gliss d4 } >>` working correctly.

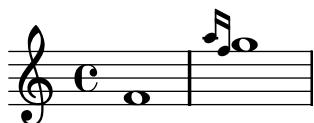

`'grace-auto-beam.ly'`

The autobeamer is not confused by grace notes.

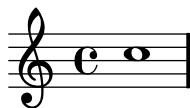

`'grace-bar-line.ly'`

Bar line should come before the grace note.

`'grace-bar-number.ly'`

Grace notes do tricky things with timing. If a measure starts with a grace note, the measure does not start at 0, but earlier. Nevertheless, lily should not get confused. For example, line breaks should be possible at grace notes, and the bar number should be printed correctly.

‘grace-beam.ly’

Grace beams and normal beams may occur simultaneously. Unbeamed grace notes are not put into normal beams.

‘grace-direction-polyphony.ly’

The \voiceOne setting is retained after finishing the grace section.

‘grace-end.ly’

Grace notes after the last note do not confuse the timing code.

‘grace-nest.ly’

Grace code should not be confused by nested sequential musics, containing grace notes; practically speaking, this means that the end-bar and measure bar coincide in this example.

‘grace-nest1.ly’

Grace code should not be confused by nested sequential musics, containing grace notes; practically speaking, this means that the end-bar and measure bar coincide in this example.

‘grace-nest2.ly’

Grace code should not be confused by nested sequential musics, containing grace notes; practically speaking, this means that the end-bar and measure bar coincide in this example.

‘grace-nest3.ly’

In nested syntax, graces are still properly handled.

‘grace-nest4.ly’

Also in the nested syntax here, grace notes appear rightly.

‘grace-nest5.ly’

Graces notes may have the same duration as the main note.

‘grace-part-combine.ly’

Grace notes may be put in a partcombiner.

‘grace-partial.ly’

A \partial may be combined with a \grace.

‘grace-staff-length.ly’

Stripped version of trip.ly. Staves should be of correct length.

`'grace-start.ly'`

Pieces may begin with grace notes.

`'grace-stem-length.ly'`

Stem lengths for grace notes should be shorter than normal notes, if possible. They should never be longer, even if that would lead to beam quantizing program.

`'grace-stems.ly'`

Here `startGraceMusic` should set `no-stem-extend` to true; the two grace beams should be the same here.

`'grace-sync.ly'`

Grace notes in different voices/staves are synchronized.

Three staves in common time (C). The top staff has a treble clef, the middle staff has a bass clef, and the bottom staff has a treble clef. All three staves have grace notes at the same position, which are synchronized in time.

`'grace-types.ly'`

There are three different kinds of grace types: the base grace switches to smaller type, the appoggiatura inserts also a slur, and the acciaccatura inserts a slur and slashes the stem.

`'grace-unfold-repeat.ly'`

When grace notes are entered with unfolded repeats, line breaks take place before grace notes.

`'grace-volta-repeat-2.ly'`

A volta repeat may begin with a grace. Consecutive ending and starting repeat bars are merged into one :||:.

`'grace-volta-repeat.ly'`

Repeated music can start with grace notes. Bar checks preceding the grace notes do not cause synchronization effects.

`'grace.ly'`

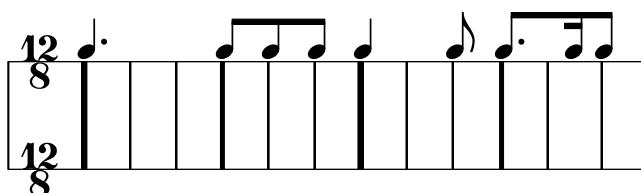

You can have beams, notes, chords, stems etc. within a \grace section. If there are tuplets, the grace notes will not be under the brace.

Main note scripts do not end up on the grace note.

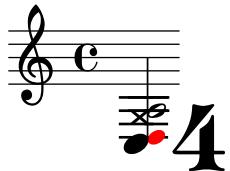

`'grid-lines.ly'`

With grid lines, vertical lines can be drawn between staves synchronized with the notes.

'grob-tweak.ly'

With the \tweak function, individual grobs that are directly caused by events may be tuned directly.

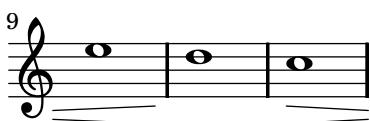

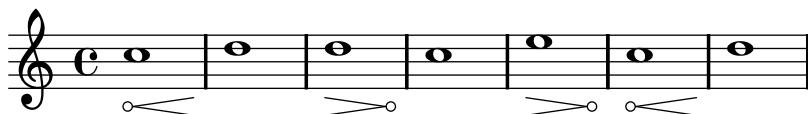

'hairpin-barline-break.ly'

If a hairpin ends on the first note of a new stave, we don't print that ending. But on the previous line, this hairpin should not be left open, and should end at the barline.

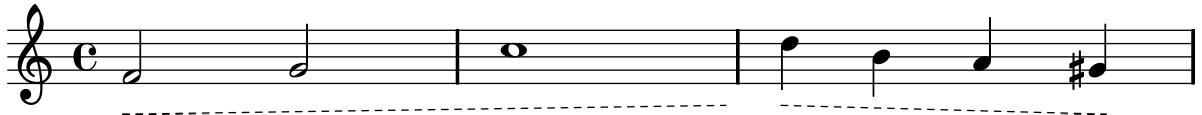

'hairpin-circled.ly'

Hairpins can have circled tips. A decrescendo del niente followed by a crescendo al niente should only print one circle.

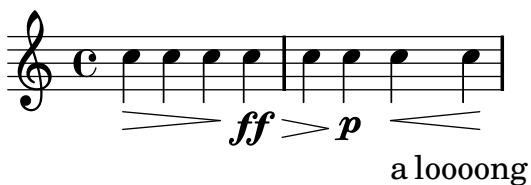

'hairpin-dashed.ly'

Hairpin crescendi may be dashed.

'hairpin-ending.ly'

Hairpin dynamics start under notes if there are no text-dynamics. If there are text dynamics, the hairpin does not run into them.

'hairpin-to-barline-mark.ly'

hairpinToBarline is not confused by very long marks.

'hairpin-to-barline.ly'

By setting hairpinToBarline, hairpins will stop at the barline preceding the ending note.

'hairpin-to-rest.ly'

Hairpins end at the left edge of a rest.

'hara-kiri-pianostaff.ly'

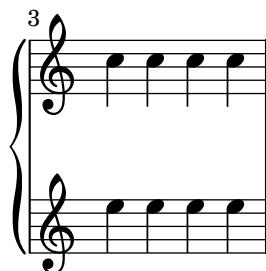

Hara-kiri staves kill themselves if they are empty. This example really contains three staves, but as they progress, empty ones are removed: this example has three staves, but some of them disappear: note how the 2nd line only has the bar number 2. (That the bar number is printed might be considered a bug, however, the scenario of all staves disappearing does not happen in practice.)

Any staff brackets and braces are removed, both in the single staff and no staff case.

This example was done with a pianostaff, which has fixed distance alignment; this should not confuse the mechanism.

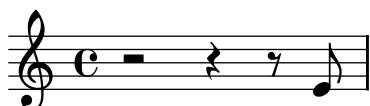

2

'hara-kiri-stanza-number.ly'

stanza numbers remain, even on otherwise empty lyrics lines.

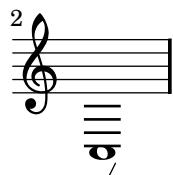

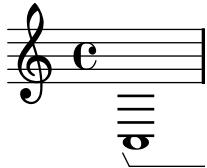

Verse 2.

bla bla

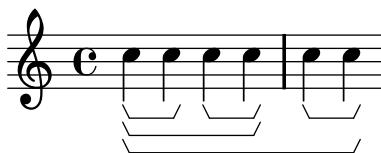

'horizontal-bracket-break.ly'

Horizontal brackets connect over line breaks.

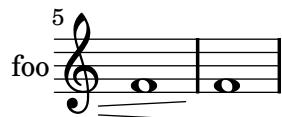

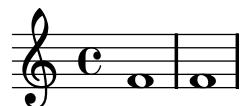

'horizontal-bracket.ly'

Note grouping events are used to indicate where analysis brackets start and end.

'instrument-name-dynamic.ly'

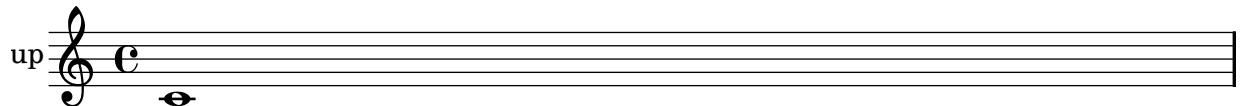

Instrument names (aligned on axis group spanners) ignore dynamic and pedal line spanners.

'instrument-name-hara-kiri.ly'

PianoStaff.instrument and PianoStaff.instr are removed when the staves are killed off.

In this example, the 2nd staff (marked by the barnumber 2) disappears as does the instrument name.

'instrument-name-markup.ly'

Instrument names are set with `Staff.instrument` and `Staff.instr`. You can enter markup texts to create more funky names, including alterations.

Clarinetto
in B \flat

Cl(B \flat)
2

'instrument-name-partial.ly'

Instrument names are also printed on partial starting measures.

foo

'instrument-name.ly'

Staff margins are also markings attached to barlines. They should be left of the staff, and be centered vertically with respect to the staff. They may be on normal staves, but also on compound staves, like the PianoStaff.

Right

Piano

Left

bert

blah

'instrument-switch.ly'

The `switchInstrument` music function modifies properties for an in staff instrument switch.

'key-clefs.ly'

Each clef have own accidental placing rules.

A musical staff showing a sequence of notes with various accidentals (sharps and flats) under different clefs (G, F, C).

A continuation of the musical staff from the previous image, showing more notes and accidentals under different clefs.

A continuation of the musical staff, showing more notes and accidentals under different clefs.

A continuation of the musical staff, showing more notes and accidentals under different clefs.

'key-signature-cancellation-extra-natural.ly'

If extraNatural is set then keys that are not altered farther away (eg from sharp to double sharp) are cancelled. Otherwise only keys that does not occur in the new key signature are cancelled.

A musical staff showing a sequence of notes with accidentals. Below the staff, text indicates 'No B-natural (#f)' and 'with F-natural (#t)'.

'key-signature-cancellation.ly'

Key cancellation signs consists of naturals for pitches that are not in the new key signature. Naturals get a little padding so the stems don't collide.

A musical staff showing a sequence of notes with accidentals, demonstrating key cancellation signs.

'key-signature-scordatura.ly'

By setting Staff.keySignature directly, key signatures can be set individually per pitch.

A musical staff showing a sequence of notes with accidentals, demonstrating individual key signatures per pitch.

'keys.ly'

Key signatures may appear on key changes, even without a barline. In the case of a line break, the restoration accidentals are printed at end of a line. If `createKeyOnClefChange` is set, key signatures are created also on a clef change.

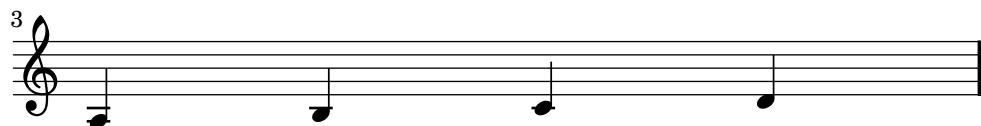

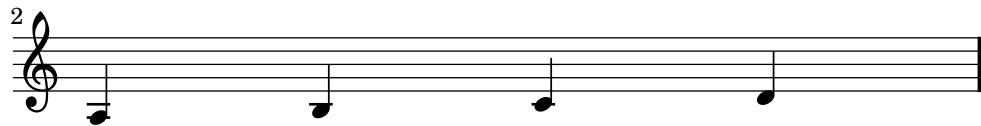

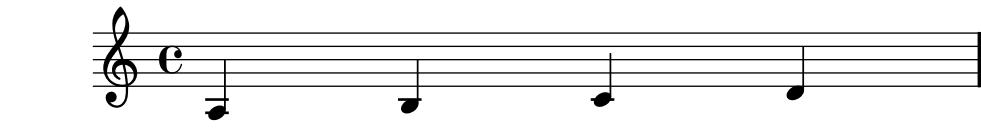

A musical staff in G clef starts in B-flat major (two flats). The first note is a quarter note with a flat sign. The second note is a quarter note with a flat sign. The third note is a quarter note with a flat sign. A vertical bar line follows. The fourth note is a quarter note with a sharp sign. The fifth note is a quarter note with a sharp sign. The sixth note is a quarter note with a sharp sign. The seventh note is a quarter note with a sharp sign.

'laissez-vibrer-ties.ly'

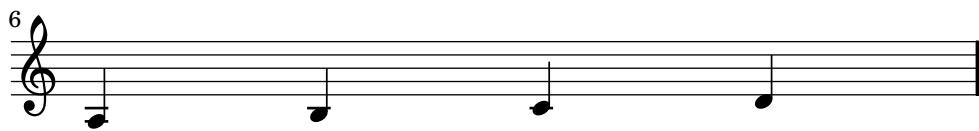

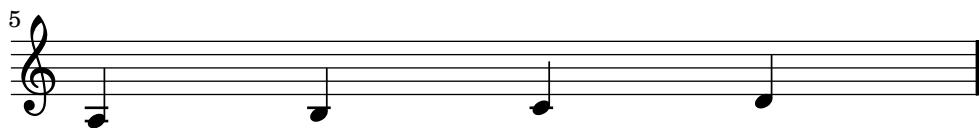

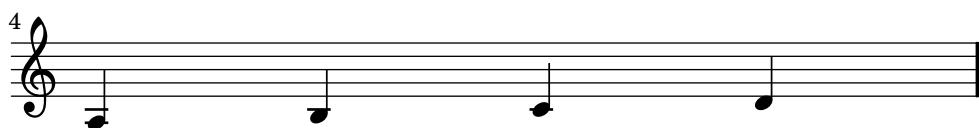

l.v. ties should avoid dots and staff lines, similar to normal ties. They have fixed size. Their formatting can be tuned with `tie-configuration`.

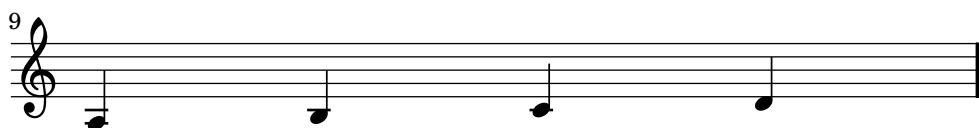

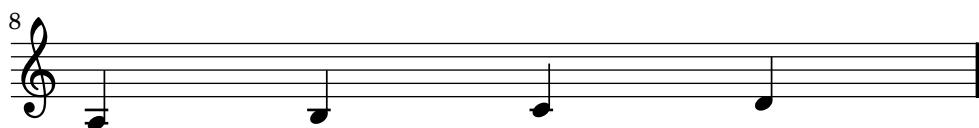

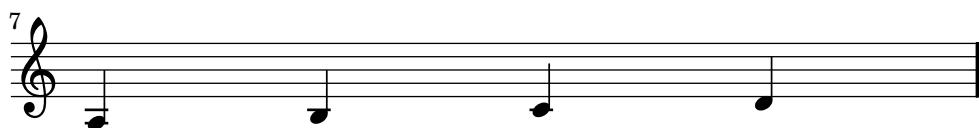

'landscape.ly'

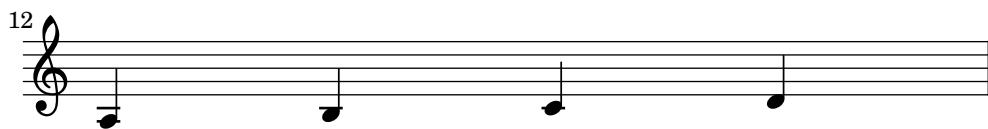

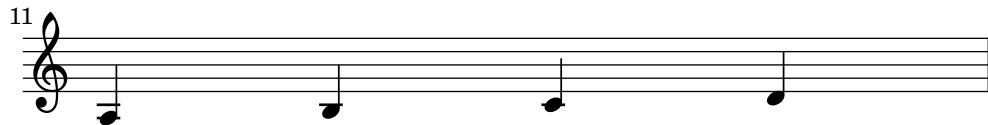

2

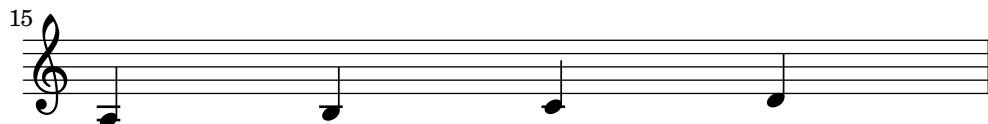

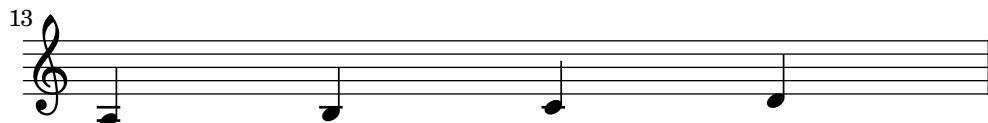

3

4

5

Music engraving by LilyPond 2.10.33—www.lilypond.org

`'ledger-line-minimum.ly'`

When ledgered notes are very close, for example, in grace notes, they are kept at a minimum distance to prevent the ledgers from disappearing.

`'ledger-line-shorten.ly'`

Ledger lines are shortened when they are very close. This ensures that ledgers lines stay separate.

'lily-in-scheme.ly'

LilyPond syntax can be used inside scheme to build music expressions, with the #{} ... #} syntax. Scheme forms can be introduced inside these blocks by escaping them with a \$, both in a LilyPond context or in a Scheme context.

In this example, the \withpaddingA, \withpaddingB and \withpaddingC music functions set different kinds of padding on the TextScript grob.

'line-arrows.ly'

Arrows can be applied to text-spanners and line-spanners (such as the Glissando)

'line-dashed-period.ly'

The period of a dashed line is adjusted such that it starts and ends on a full dash.

'lyric-combine-new.ly'

With the \lyricsto mechanism, individual lyric lines can be associated with one melody line. For each lyric line, can be tuned whether to follow melismata or not.

'lyric-combine-polyphonic.ly'

Polyphonic rhythms and rests do not disturb \lyricsto.

Do mi nus ex

A musical staff in common time (indicated by '8') and C major (indicated by a treble clef). It consists of two voices: the top voice has quarter notes followed by eighth note rests, and the bottom voice has eighth notes followed by sixteenth note rests. The lyrics 'Do na' are placed below the notes.

'lyric-combine-switch-voice-2.ly'

switching voices halfway a lyricsto is possible.

A musical staff in common time (indicated by 'C') and C major (indicated by a treble clef). It shows a melody with three distinct notes. The lyrics 'two two this' are placed below the notes, corresponding to the first, second, and third notes respectively.

'lyric-combine-switch-voice.ly'

Switching melody to a different voice works even the switch occurs together with context instantiation.

A musical staff in common time (indicated by 'C') and C major (indicated by a treble clef). It shows a melody with three distinct notes. The lyrics 'Ty - ran - no - sau - - rus' are placed below the notes, corresponding to the first, second, and third notes respectively. A bracket above the notes indicates a melodic segment spanning three measures.

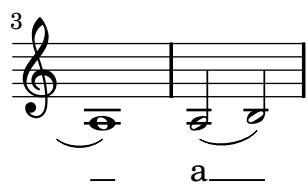

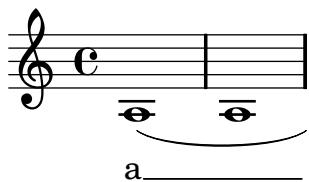

'lyric-combine.ly'

Lyrics can be set to a melody automatically. Excess lyrics will be discarded. Lyrics will not be set over rests. You can have melismata either by setting a property melismaBusy, or by setting automaticMelismas (which will set melismas during slurs and ties). If you want a different order than first Music, then Lyrics, you must precook a chord of staves/lyrics and label those. Of course, the lyrics ignores any other rhythms in the piece.

Three musical staves in common time (indicated by 'C') and C major (indicated by a treble clef). The top staff shows a continuous series of eighth notes. The lyrics 'la la - - la la' are placed below the notes, corresponding to the first, second, and third groups of notes. The middle staff shows a similar pattern with a melisma indicated by a bracket over three notes. The lyrics 'da - da____ da - da da' are placed below the notes, corresponding to the first, second, and third groups of notes. The bottom staff shows a continuous series of eighth notes. The lyrics 'la la - - la la' are placed below the notes, corresponding to the first, second, and third groups of notes.

'lyric-extender-broken.ly'

Lyric extenders run to the end of the line if it continues the next line. Otherwise, it should run to the last note of the melisma.

'lyric-extender-no-heads.ly'

Extender engraver also notices the lack of note heads. Here the extender ends on the 2nd quarter note, despite the grace note without a lyric attached.

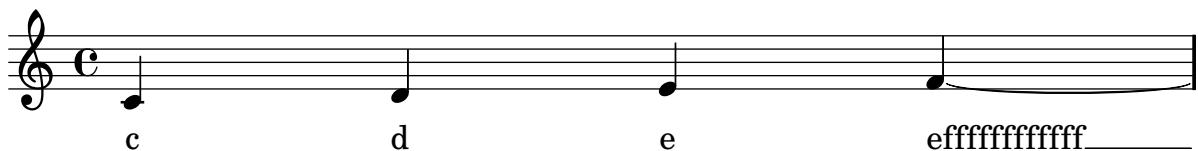

'lyric-extender-rest.ly'

If `extendersOverRests` is set, an extender is not terminated upon encountering a rest.

'lyric-extender-right-margin.ly'

extenders will not protrude into the right margin

A musical staff with a treble clef and a '2' above it. It contains four notes. Below the first note is a dash (-). Below the second note is the letter 'e'. Below the third note is the letter 'd'. Below the fourth note is the letter 'c'.

'lyric-extender.ly'

A LyricExtender may span several notes. A LyricExtender does not extend past a rest, or past the next lyric syllable.

A musical staff with a treble clef. It contains two groups of notes. The first group has a 'c' below it. The second group has a 'ha' below it. Below the second group is a long 'ahaaaaaaa' followed by a hyphen.

'lyric-hyphen-break.ly'

Hyphens are print at the beginning of the line only when they go past the first note.

A musical staff with a treble clef. It contains a single group of notes. Below the notes is the word 'blablabla-' followed by a hyphen.

A musical staff with a treble clef. It contains a single group of notes. Below the notes is the word 'blablabla-' followed by a hyphen.

A musical staff with a treble clef. It contains a single group of notes. Below the notes is the word 'blablabla-' followed by a hyphen.

'lyric-hyphen-retain.ly'

The minimum distance between lyrics are determined by the `minimum-distance` of `LyricHyphen` and `LyricSpace`.

The ideal length of a hyphen is determined by its `length` property, but it may be shortened down to `minimum-length` in tight situations. If in this it still does not fit, the hyphen will be omitted.

Like all overrides within `\lyricsto` and `\addlyrics`, the effect of a setting is delayed is one syllable.

A musical staff with a treble clef and a '2' above it. It contains a series of groups of notes. Below each group is a word: 'syllab word syl-lab word syl-labword'.

'lyric-hyphen.ly'

In lyrics, hyphens may be used.

A musical staff in common time (C) with a treble clef. There are four notes: the first three are grouped by a brace underneath them, and the fourth note is separate. Below the staff, the lyrics "blaalb xxxyyy" are written, corresponding to the notes.

'lyric-melisma-manual.ly'

Melisma's may be entered manually by substituting _ for lyrics on notes that are part of the melisma.

A musical staff in common time (C) with a treble clef. There are two notes. The first note has a melisma consisting of two smaller notes, with a brace underneath. The second note is separate. Below the staff, the lyrics "Ky - ri _____ e" are written, with the melisma aligned with the first note.

'lyric-phrasing.ly'

Normally, the lyric is centered on the note head. However, on melismata, the text is left aligned on the left-side of the note head.

A musical staff in common time (C) with a treble clef. There are three notes. The first note has a melisma consisting of three smaller notes, with a brace underneath. The second note is separate. Below the staff, the lyrics "alllll _____ tijd iizzz" are written, with the melisma aligned with the first note.

'lyric-tie.ly'

Tildes in lyric syllables are converted to tie symbols.

waoa

'lyrics-after-grace.ly'

Lyrics are ignored for aftergrace notes.

A musical staff in common time (C) with a treble clef. There are two notes: a regular note followed by a grace note. Below the staff, the lyrics "foo - bar" are written, corresponding to the notes.

'lyrics-bar.ly'

Adding a Bar_engraver to the Lyrics context makes sure that lyrics do not collide with barlines.

A musical score in C major with two staves. The first staff has lyrics 'loooooooooooooong' and 'syllable:' placed below it. The second staff has 'no Bar Engraver' written below it. Both staves have a barline at the end.

'lyrics-melisma-beam.ly'

Melismata are triggered by manual beams.

A musical score in C major with one staff. The lyrics 'bla bla bla' are placed below the staff, with manual beams connecting the notes. The staff ends with a barline.

'lyrics-no-notes.ly'

lyric syllables without note attachment are not centered; Centering may cause unintended effects when the papercolumn is very wide.

A musical score in C major with one staff. The lyrics 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxx' are placed below the staff, with no note attachment. The staff ends with a barline. Below the staff, there are two 'x' characters.

'lyrics-tenor-clef.ly'

Lyrics are not lowered despite the presence of an octavation 8.

A musical score in C major with one staff. The lyrics 'bla bla bla bla' are placed below the staff, with an octavation 8 symbol (8) above the staff. The staff ends with a barline.

'markup-arrows.ly'

The feta font has arrow heads

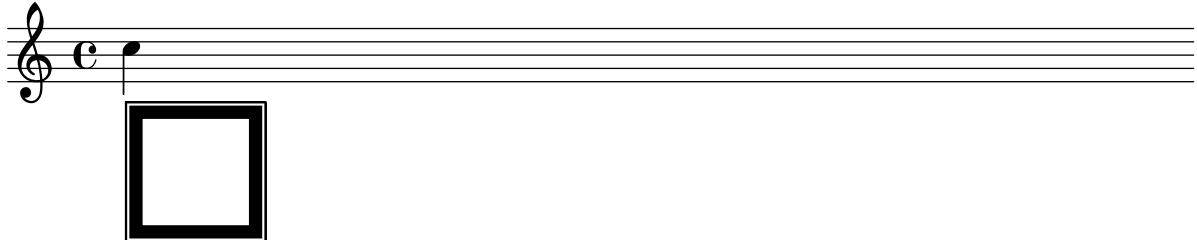

`'markup-bidi-pango.ly'`

A single pango string is considered to have one direction. The hebrew in this example (including punctuation) is set right-to-left, with the first word (containing 1) on the right.

לליילל, רר2ר.

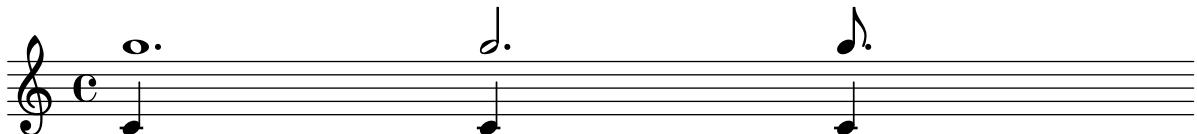

'markup-eps.ly'

The `epsfile` markup command reads an EPS file

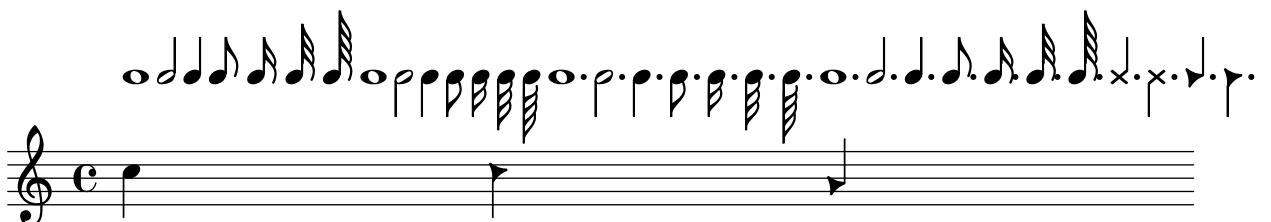

'markup-note-dot.ly'

A dotted whole note displayed via the `\note` command must separate the note head and the dot. The dot avoids the upflag.

'markup-note.ly'

The note markup function may be used to make metronome markings. It works for a variety of flag, dot and duration settings.

'markup-scheme.ly'

There is a Scheme macro `markup` to produce markup texts using a similar syntax as `\markup`.

```
foo bar[baz] bazr bla
```

Norsk² **sfzp** A A A A alike

```
string 1 string 2
```

```
foo bar[baz] bazr bla
```

Norsk² **p** **sfzp** A A A A alike

```
string 1 string 2
```

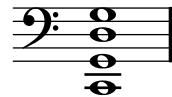

'markup-score.ly'

Use \score block as markup command.

Solo Cello Suites

Suite IV

Originalstimmung:

'markup-stack.ly'

Markup scripts may be stacked.

'markup-syntax.ly'

Demo of markup texts, using LilyPond syntax.

'markup-user.ly'

Own markup commands may be defined by using the `define-markup-command` scheme macro.

'markup-word-wrap.ly'

The markup commands `\wordwrap` and `\justify` produce simple paragraph text.

this is normal text This is a test of the wordwrapping function. 1 This is a continuing test of the wordwrapping function. 2 This is a test of the wordwrapping function. 3 This is a test of the wordwrapping function. 4 1a111 11111 **22222** 2222

this is normal text This is a test of the wordwrapping continuing function, but with justification. 1 This is a test of the wordwrapping function, but with justification. 2 This is a test of a b the wordwrapping function, but with justification. 3 This is a test of the wordwrapping function, but with justification. bla bla

Om mani padme hum Om mani padme hum. Gate Gate paragate Gate Gate paragate Gate Gate paragate Gate Gate paragate Gate Gate paragate.

Om mani padme hum Om mani padme hum. Gate Gate paragate Gate Gate paragate Gate Gate paragate Gate Gate paragate Gate Gate paragate.

'measure-grouping.ly'

The Measure_grouping_engraver adds triangles and brackets above beats when the beats of a time signature are grouped.

'mensural-ligatures.ly'

Mensural ligatures show different shapes, depending on the rhythmical pattern and direction of the melody line.

ligaturaæ binaria

A musical staff in common time (C). It shows various ligature patterns labeled with abbreviations: BL, BL, LL, LL, BB, BB, LB, LB, SS, SS. The SS ligature is a bracket spanning two measures.

ligaturaæ ternariae, quaternariae, etc.

A musical staff in common time (C). It shows more complex ligature patterns labeled with abbreviations: BBL, BBBB, SSBBBLB, LBMxBL, BBBBLL, SSBLLBB. The SSBLLBB ligature is a bracket spanning three measures.

dtv-Atlas

A musical staff in common time (C). It shows ligature patterns labeled with abbreviations: BBL, BBBL, L.B.BBLBBB, SSBB, LBL, SSBL. The SSBL ligature is a bracket spanning two measures.

Ockeghem: Missa De plus en plus

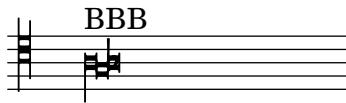

A musical staff in common time (C). It shows ligature patterns labeled with abbreviations: MxMx LBBBBB, MxL BBB LBBBBB, BBBBL, SSB, LLLL. The SSB ligature is a bracket spanning two measures.

Ockeghem: Requiem

A musical staff in common time (C). It shows a long ligature labeled SBBBBBBBBBL, followed by BBBBL.

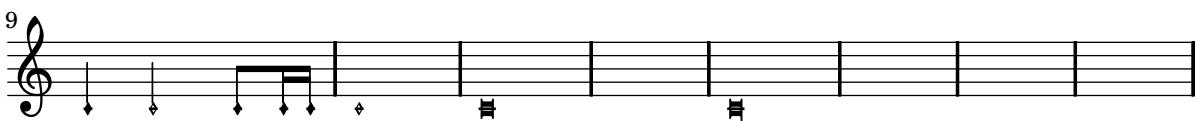

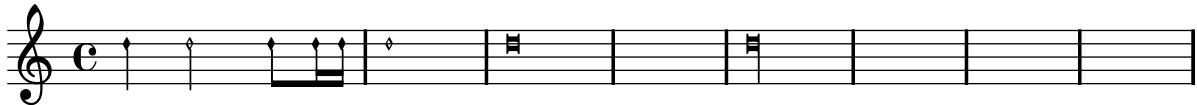

crazy ligatures

A musical staff in common time (C). It shows a series of ligatures labeled BBBBB, BB, B.B.B.B.B.B.B.B., B.B. The B.B. ligature is a bracket spanning two measures.

`'mensural.ly'`

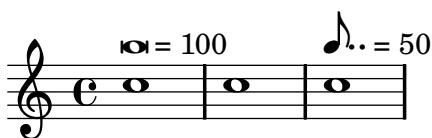

There is limited support for mensural notation: note head shapes are available. Mensural stems are centered on the note heads, both for up and down stems.

`'metronome-marking.ly'`

Here `\tempo` directives are printed as metronome markings.

The marking is left aligned with the time signature, if there is one.

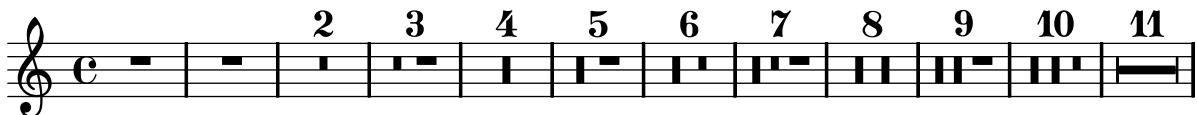

`'midi-dynamics.ly'`

Midi also handles crescendo and decrescendo, either starting and ending from specified or unspecified sound level.

`'mm-rests2.ly'`

If `Score.skipBars` is set, the signs for four, two, and one measure rest are combined to produce the graphical representation of rests for up to 10 bars. The number of bars will be written above the sign.

`'multi-measure-rest-center.ly'`

The multimeasure rest is centered exactly between bar lines.

'multi-measure-rest-grace.ly'

Multi-measure rests are centered also in the case of grace notes.

'multi-measure-rest-instr-name.ly'

There are both long and short instrument names. Engraving instrument names should not be confused by the multimeasure rests.

'multi-measure-rest-multi-staff-center.ly'

The centering of multi-measure rests is independent on prefatory matter in other staves.

'multi-measure-rest-spacing.ly'

By setting texts starting with a multi-measure rest, an extra spacing column is created. This should not cause problems.

'multi-measure-rest-text.ly'

Texts may be added to the multi-measure rests.

By setting the appropriate **spacing-procedure**, we can make measures stretch to accomodate wide texts.

'multi-measure-rest.ly'

Multi-measure rests do not collide with barlines and clefs. They are not expanded when you set `Score.skipBars`. Although the multi-measure-rest is a Spanner, minimum distances are set to keep it colliding from barlines.

Rests over measures during longer than 2 wholes use breve rests. When more than 10 or more measures (tunable through `expand-limit`) are used then a different symbol is used.

'music-function.ly'

Music function are generic music transformation functions, which can be used to extend music syntax seamlessly. Here we demonstrate a `\myBar` function, which works similar to `\bar`, but is implemented completely in Scheme.

'music-map.ly'

With `music-map`, you can apply functions operating on a single piece of music to an entire music expression. In this example, the the function `notes-to-skip` changes a note to a skip. When applied to an entire music expression in the 1st measure, the scripts and dynamics are left over. These are put onto the 2nd measure.

'newaddlyrics.ly'

newlyrics, multiple stanzas, multiple lyric voices.

MY FIRST LI - LY SONG,
NOT MUCH CAN GO WRONG!

`'no-staff.ly'`

The printing of the staff lines may be suppressed by removing the corresponding engraver.

`'non-empty-text.ly'`

By default, text is set with empty horizontal dimensions. The boolean property `no-spacing-rods` in `TextScript` is used to control the horizontal size of text.

A musical staff with a key signature of C major and a tempo of quarter note = 120. It contains two eighth notes. Below the staff, the text "very wide and long text" is centered, showing that it does not have enough horizontal space to fit without being cut off.

A musical staff with a key signature of C major and a tempo of quarter note = 120. It contains two eighth notes. Below the staff, the text "very wide and long text" is centered, showing that it does not have enough horizontal space to fit without being cut off.

`'note-head-chord.ly'`

Note heads are flipped on the stem to prevent collisions. It also works for whole heads that have invisible stems.

A musical staff with a key signature of C major and a tempo of quarter note = 120. It contains three chords: a C major chord, a D major chord, and an E major chord. The note heads are flipped to prevent collisions.

`'note-head-harmonic-whole.ly'`

A harmonic note head must be centered if the base note is a whole note.

A musical staff with a key signature of C major and a tempo of quarter note = 120. It contains a whole note G and a harmonic note head above it, both with stems pointing up. The harmonic note head is centered relative to the base note.

`'note-head-harmonic.ly'`

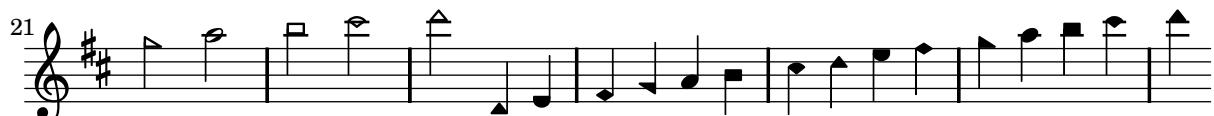

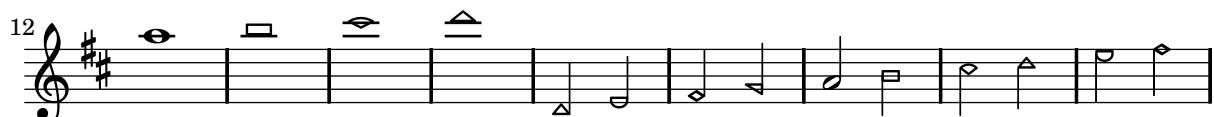

The handling of stems for harmonic notes must be completely identical to normal note heads.

Harmonic heads do not get dots. If `harmonicAccidentals` is unset, they also don't get accidentals.

A musical staff with a key signature of C major and a tempo of quarter note = 120. It contains a C major chord followed by a sequence of notes with harmonic heads, all with stems pointing up. The harmonic heads are centered relative to the base note.

`'note-head-solfa.ly'`

With `shapeNoteStyles`, the style of the note head is adjusted according to the step of the scale, as measured relative to the `tonic` property.

`'note-head-style.ly'`

Note head shapes may be set from several choices. The stem endings should be adjusted according to the note head. If you want different note head styles on one stem, you must create a special context.

Harmonic notes have a different shape and different dimensions.

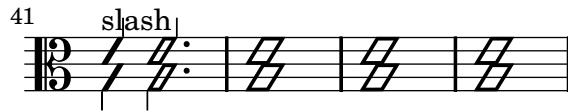

default baroque

9 neomensural mensural

17 petrucci harmonic

25 diamond cross

33 xcircle triangle

'note-line.ly'

Note head lines (e.g. glissando) run between centers of the note heads.

3

'number-staff-lines.ly'

The number of stafflines of a staff can be set. Ledger lines both on note heads and rests, as well as barlines, are adjusted accordingly.

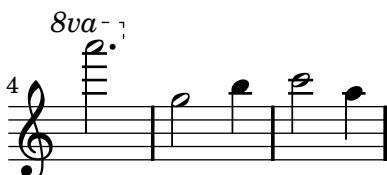

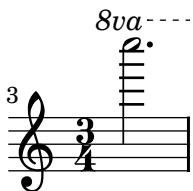

'optimal-page-breaking-hstretch.ly'

The optimal page breaker will stretch the systems horizontally so that the vertical spacing will be more acceptable. The page-spacing-weight parameter controls the relative importance of vertical/horizontal spacing. Because ragged-last-bottom is on, only the first page should be horizontally stretched.

6

`'ottava-broken.ly'`

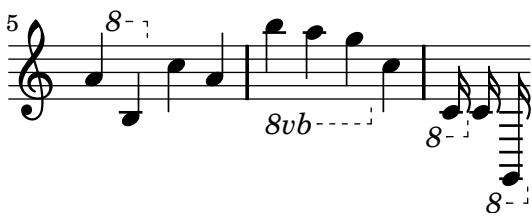

At line breaks, ottava brackets have no vertical line and their horizontal line does not stick out. The dashed line runs until the end of the line (regardless of prefatory matter).

`'ottava.ly'`

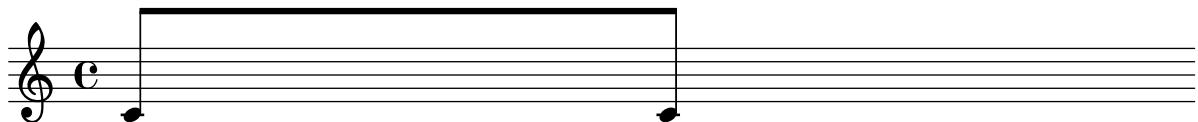

Ottava brackets are supported, through the use of the scheme function `set-octavation`.

The spanner should go below a staff for 8va bassa, and the ottavation string can be tuned with `Staff.ottavation`.

`'override-nest.ly'`

Sublist of grob property lists may be also tuned. In the next example, the `beamed-lengths` property of the `Stem` grob is tweaked.

'page-breaks.ly'

Stress optimal page breaking. This should look nice and even on 4 a6 pages.

Title

www.lilypond.org

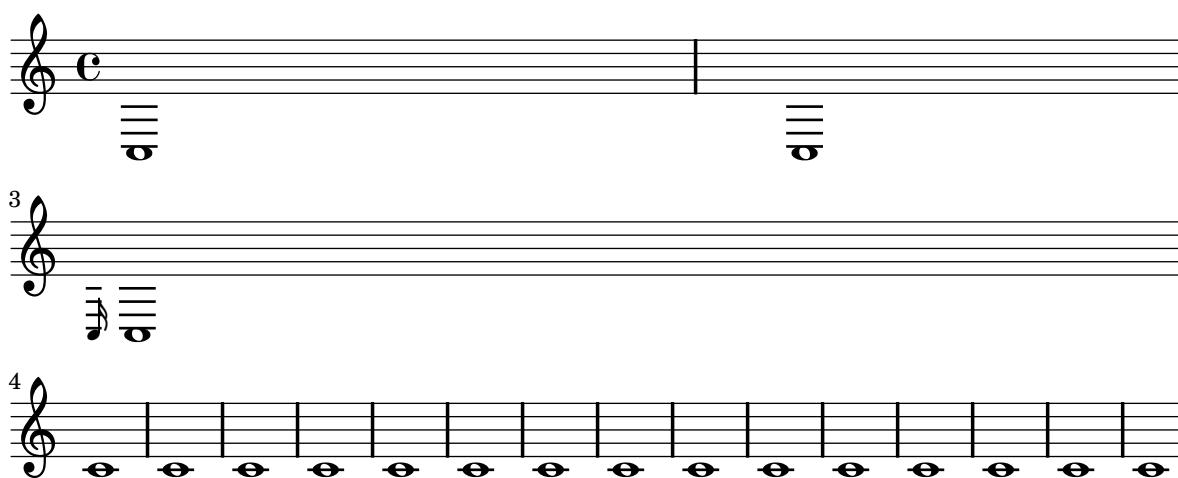

'page-layout-manual-position.ly'

By setting `Y-offset` and `X-offset` for the `line-break-system-details` of `NonMusicalPaperColumn`, systems may be placed absolutely on the printable area of the page.

'page-layout-twopass.ly'

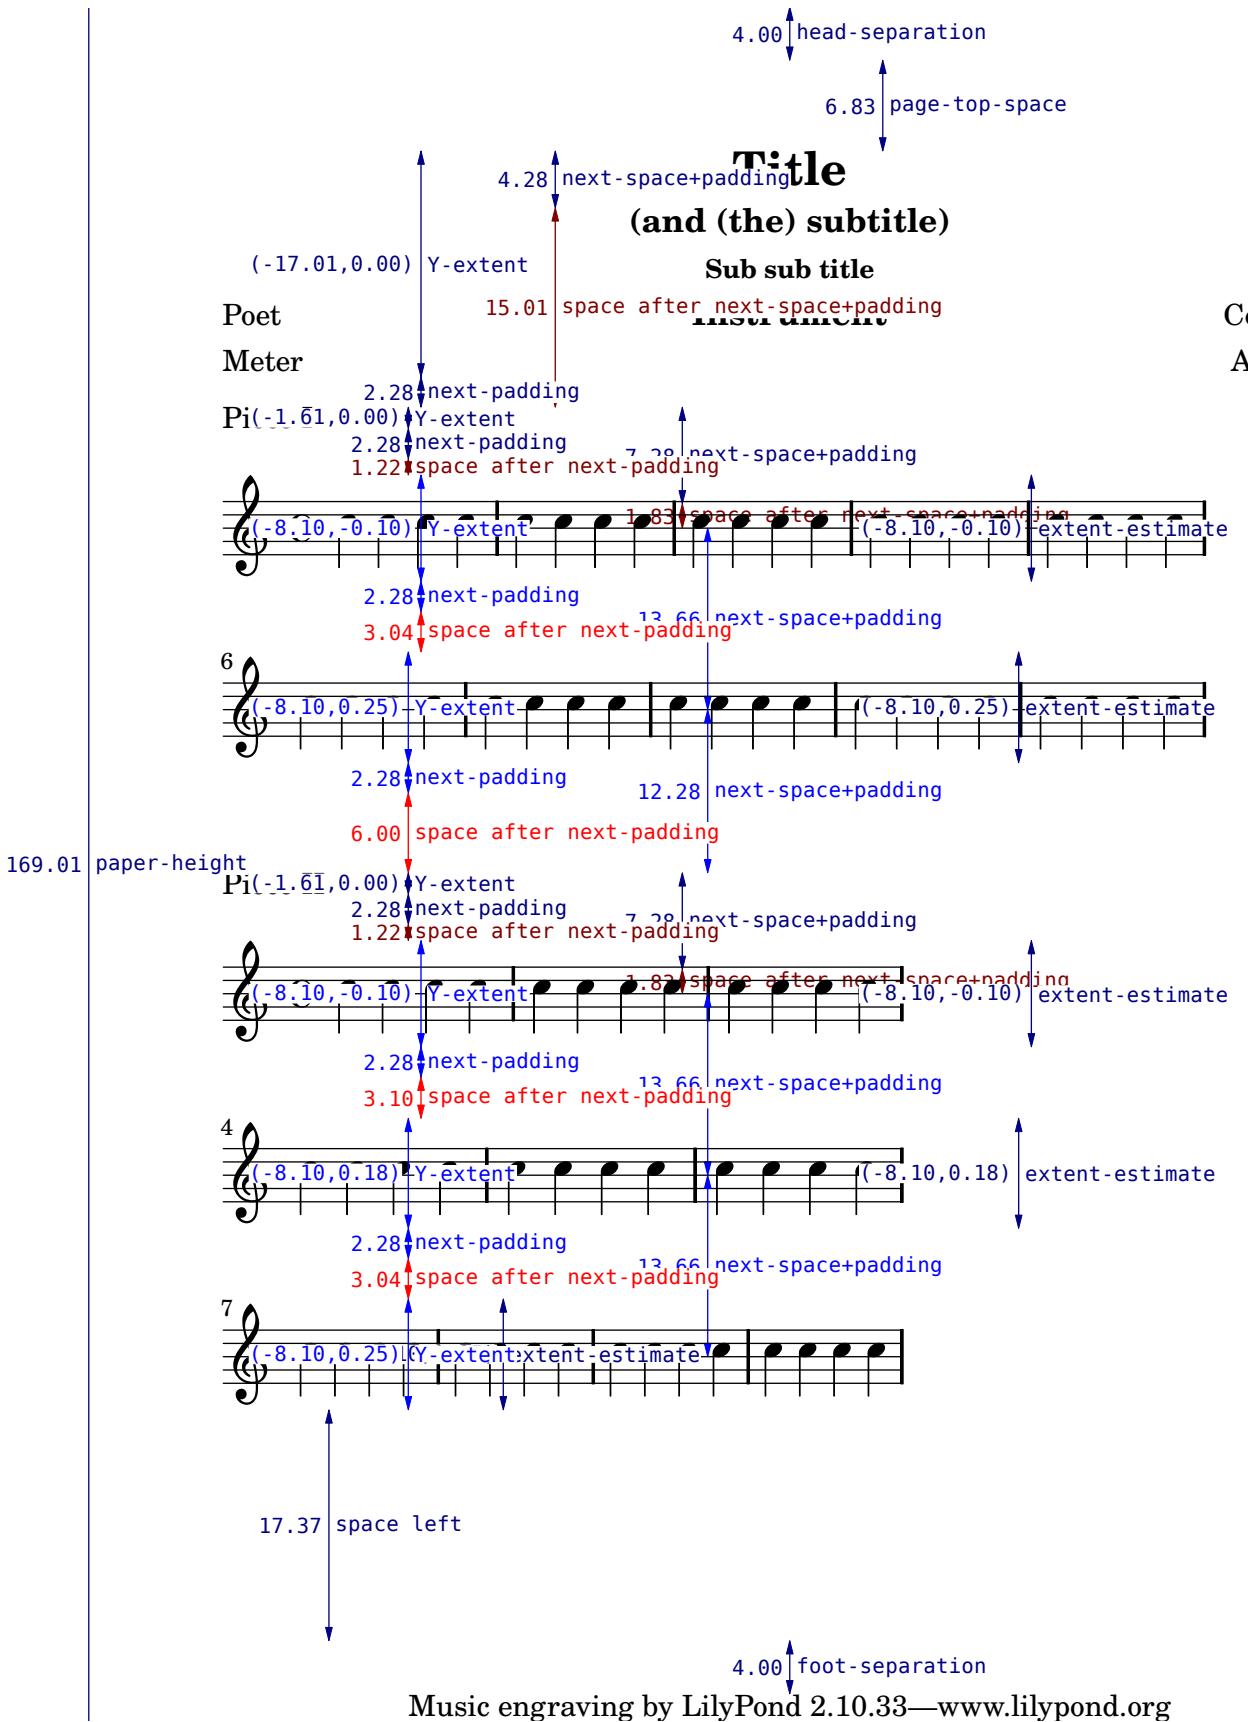

Page breaking details can be stored for later reference.

‘page-layout.ly’

This shows how different settings on \paper modify the general page layout. Basically \paper will set the values for the whole paper while \layout for each \score block.

This file is best viewed outside the collated files document.

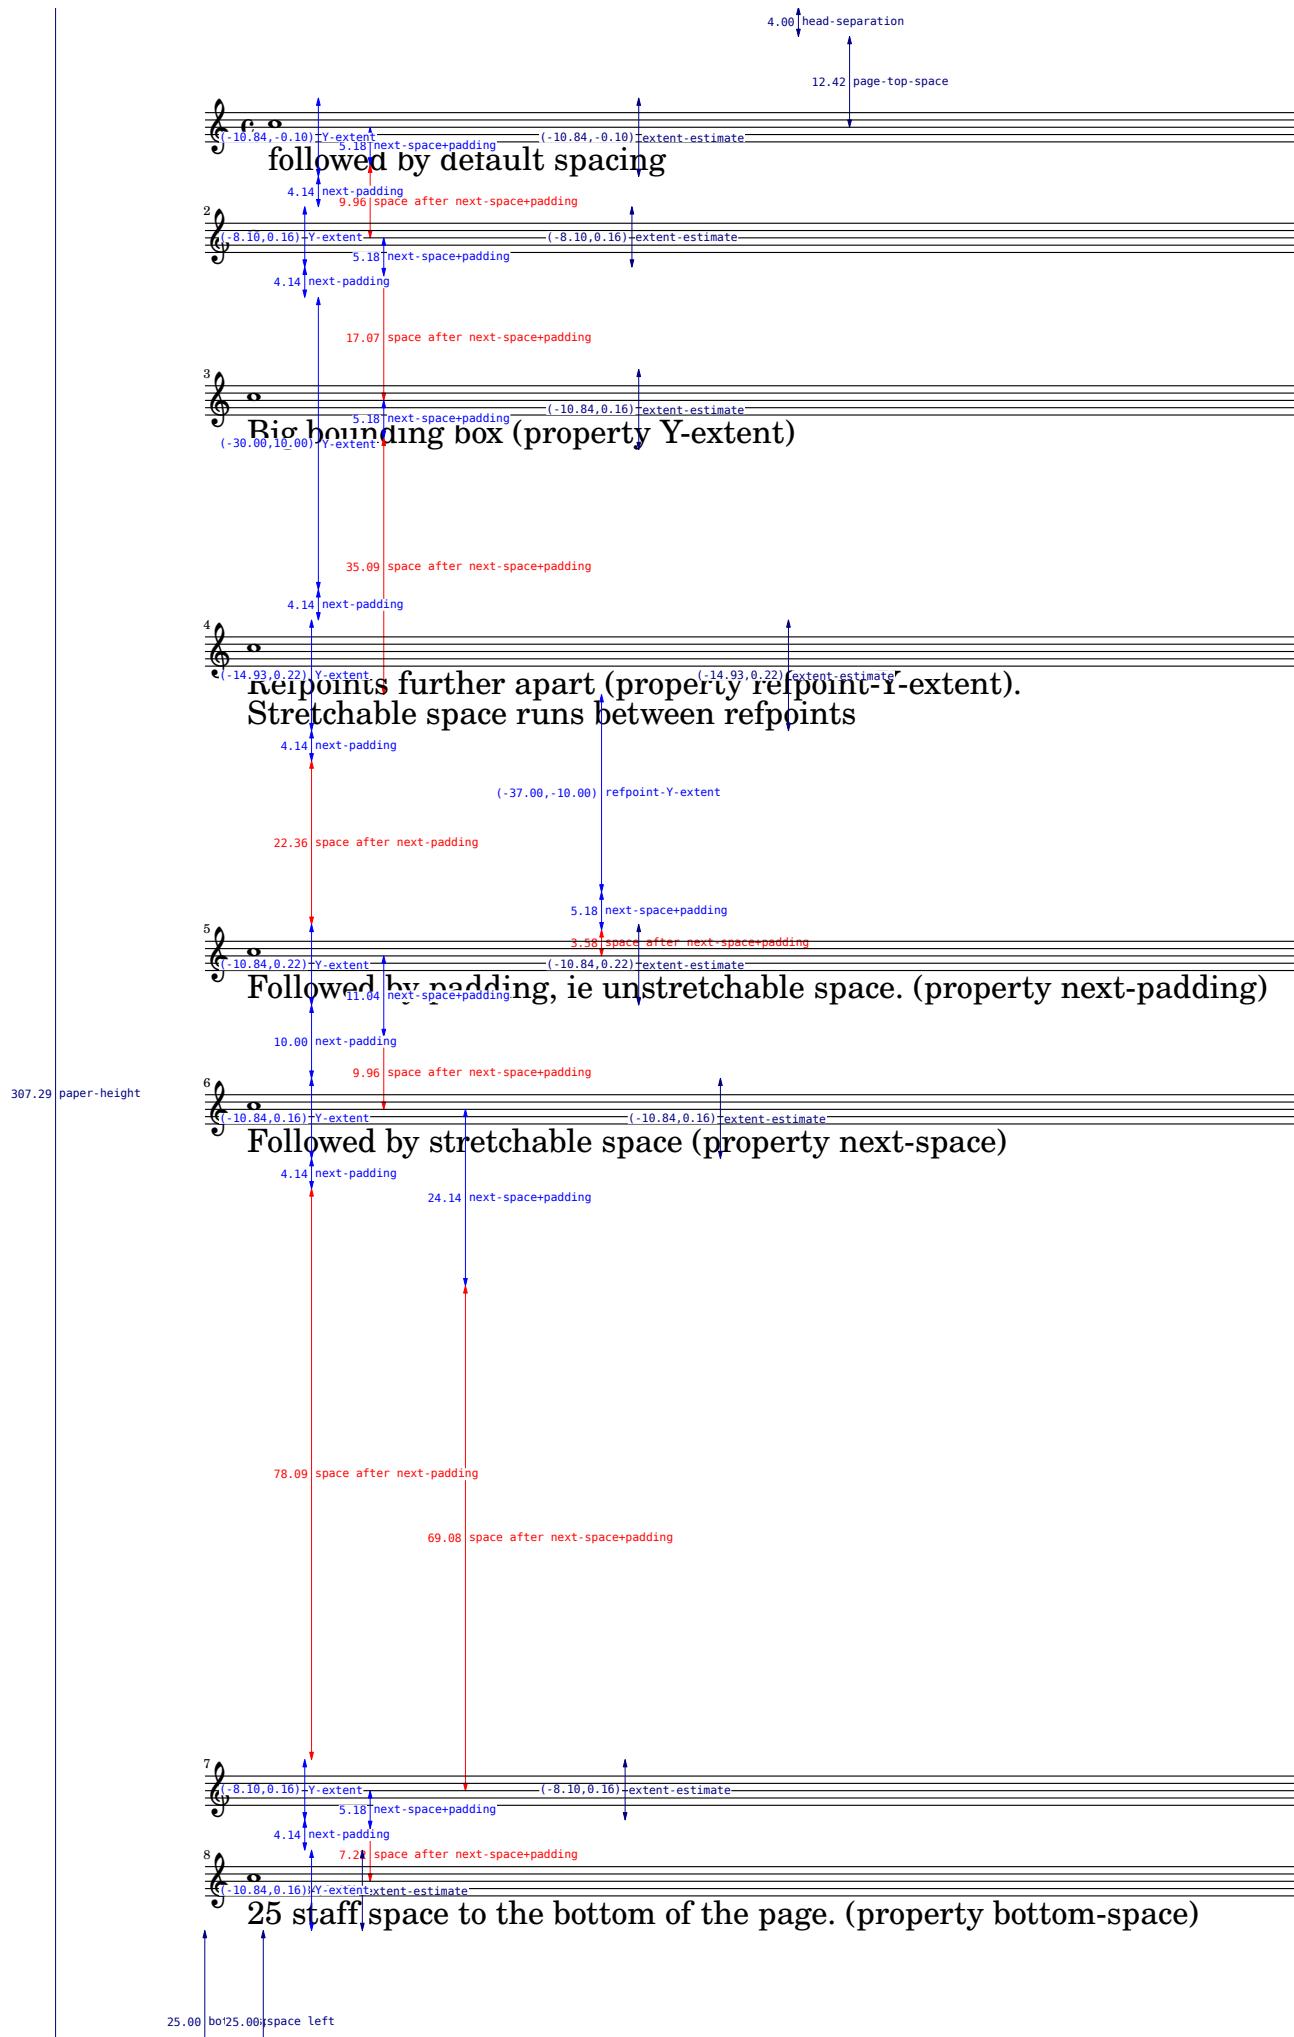

'page-spacing.ly'

By setting properties in NonMusicalPaperColumn, vertical spacing of page layout can be adjusted.

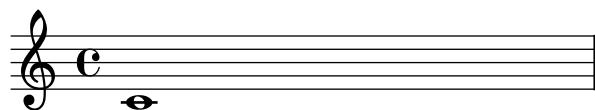

For technical reasons, `overrideProperty` has to be used for setting properties on individual object. `\override` may still be used for global overrides.

By setting `annotate-spacing`, we can see the effect of each property.

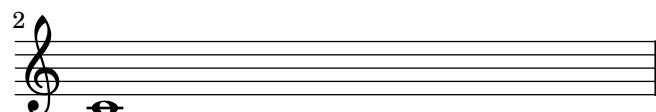

‘page-top-space.ly’

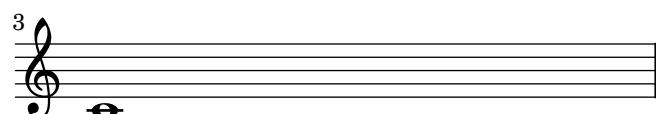

By setting `page-top-space`, the Y position of the first system can be forced to be uniform.

bla

Music engraving by LilyPond 2.10.33—www.lilypond.org

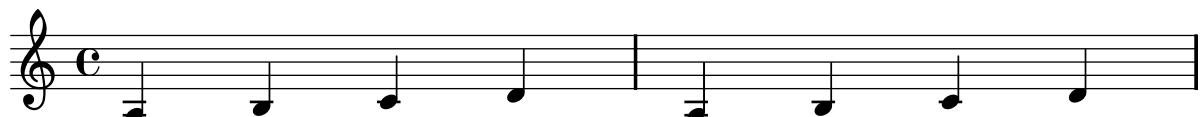

'page-turn-page-breaking-badturns.ly'

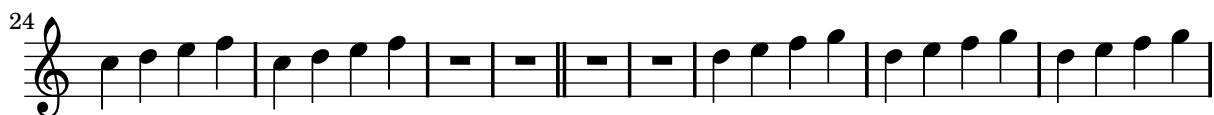

If there are no good places to have a page turn, the optimal-breaker will just have to recover gracefully. This should appear on 3 pages.

'page-turn-page-breaking.ly'

The page-turn breaker will put a page turn after a rest unless there is a 'special' barline within the rest, in which case the turn will go after the special barline.

'parenthesize.ly'

The `parenthesize` function is a special tweak that encloses objects in parentheses. The associated grob is `Score.ParenthesesItem`.

'part-combine-a2.ly'

The `a2` string is printed only on notes (i.e. not on rests), and only after chords, solo or polyphony.

'part-combine-cross.ly'

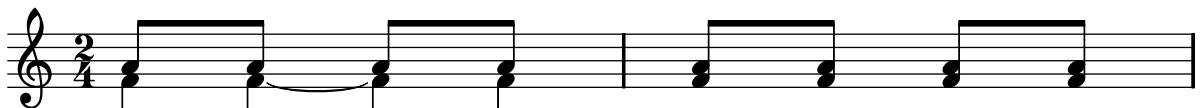

The part combiner stays apart for crossing voices.

'part-combine-global.ly'

The analysis of the part combiner is non-local: in the following example, the decision for using separate voices in the 1st measure is made on the 2nd note, but influences the 1st note.

In the 2nd measure, the pattern without the tie, leads to combined voices.

'part-combine-mmrest-after-solo.ly'

Multimeasure rests are printed after solos, both for solo1 and for solo2.

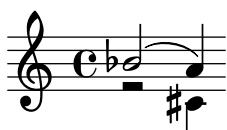

'part-combine-solo-end.ly'

SOLO is printed even if the solo voice ends before the other one. Unfortunately, the multi-rest of the 1st voice (which is 2 bars longer than the 2nd voice) does not get printed.

'part-combine-solo-global.ly'

In this example, solo1 should not be printed over the 1st note, because of the slur which is present from the one-voice to the two-voice situation.

'part-combine-solo.ly'

A solo string can only be printed when a note starts. Hence, in this example, there is no Solo-2 although the 2nd voice has a dotted quarter, while the first voice has a rest.

A Solo indication is only printed once; (shared) rests do not require reprinting a solo indication.

Solo 1/2 can not be used when a spanner is active, so there is no solo over any of the tied notes.

'part-combine-text.ly'

The new part combiner detects a2, solo1 and solo2, and prints i texts accordingly.

'part-combine-tuplet-end.ly'

End tuplets events are sent to the starting context, so even after a switch, a tuplet ends correctly.

'part-combine-tuplet-single.ly'

Tuplets in combined parts only print one bracket.

'part-combine.ly'

The new part combiner stays apart from:

- different durations,
- different articulations (taking into account only slur/beam/tie), and
- wide pitch ranges.

'pedal-bracket.ly'

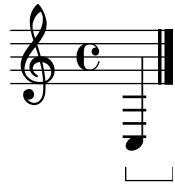

The brackets of a piano pedal should start and end at the left side of the note. If a note is shared between two brackets, these ends are flared.

At a line-break, there are no vertical endings.

'pedal-end.ly'

Unterminated piano pedal brackets run to the end of the piece.

'pedal-ped.ly'

The standard piano pedals style comes with Ped symbols. The pedal string can be also tuned, for example, to a shorter tilde/P variant at the end of the melody.

'phrasing-slur-slur-avoid.ly'

PhrasingSlurs go over normal slurs.

'prefatory-empty-spacing.ly'

The A is atop an invisible barline. The barline, although invisible, is also translated because it is the last one of the break alignment.

'prefatory-spacing-matter.ly'

Distances between prefatory items (e.g. clef, bar, etc.) are determined by engraving standards. These distances depend on which items are combined. Mid-line, the order for clef and bar-line is different from the start of line.

‘property-grace-polyphony.ly’

Property overrides and reverts from \grace do not interfere with the overrides and reverts from polyphony.

‘property-once.ly’

Once properties take effect during a single time step only.

‘quote-cue-during.ly’

The cueDuring form of quotation will set stem directions on both quoted and main voice, and deliver the quoted voice in the cue Voice. The music function \killCues can remove all cue notes.

Spanners run to the end of a cue section, and are not started on the last note.

The image shows three staves of music. The top staff is labeled "quoteMe" and contains a melody with dynamic markings "ff" and a crescendo. The middle staff is labeled "orig (killCues)" and shows the same melody but with no dynamic markings. The bottom staff is labeled "orig+quote" and shows the same melody as the top staff, including the dynamic markings. This illustrates how the "quoteMe" form preserves original dynamics and stem directions, while "orig (killCues)" removes them.

‘quote-cyclic.ly’

Two quoted voices may refer to each other. In this example, there are notes with each full-bar rest.

The image shows two staves of music. The top staff consists of a single continuous melody. The bottom staff consists of two voices: a bass voice and a treble voice. The bass voice has a full-bar rest at the beginning, and the treble voice begins immediately. This illustrates how two quoted voices can refer to each other in a cyclic manner.

'quote-during.ly'

With \cueDuring and \quoteDuring, fragments of previously entered music may be quoted. quotedEventTypes will determine what things are quoted. In this example, a 16th rest is not quoted, since rest-event is not in quotedEventTypes.

The musical score consists of three staves. The top staff, labeled "quoteMe", contains a melody with a dynamic marking "ff". The middle staff, labeled "orig", contains the same melody. The bottom staff, labeled "orig+quote", contains the melody with a 16th rest removed from the first measure.

'quote-grace.ly'

Quotes may contain grace notes. The grace note leading up to an unquoted note is not quoted.

The musical score consists of three staves. The top staff, labeled "quoted", contains a melody with grace notes. The middle staff, labeled "original", contains the same melody. The bottom staff, labeled "quoted", contains the melody with grace notes removed.

'quote-tie.ly'

Voices from different cues must not be tied together. In this example, the first note has a tie. This note should not be tied to the 2nd note.

The musical score consists of two staves. The top staff shows a note tied to a rest. The bottom staff shows the same note tied to the next note, demonstrating that notes from different voices should not be tied together.

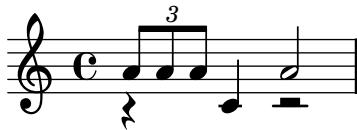

'quote-transposition.ly'

Quotations take into account the transposition of both source and target. In this example, all instruments play sounding central C, the target is an instrument in F. The target part may be \transposed. In this case, all the pitches (including the quoted ones) will be transposed as well.

The musical score consists of two staves. The top staff is labeled "clar sax" and shows a melody. The bottom staff is labeled "clar sax" and shows the same melody transposed up one tone, with the label "up 1 tone" below it.

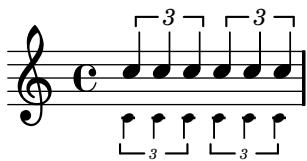

'quote-tuplet-end.ly'

Tuplet bracket ends properly when quoting.

'quote-tuplet.ly'

In cue notes, Tuplet stops are handled before new tuplets start.

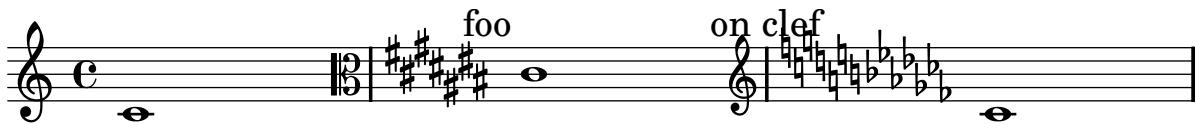

'quote.ly'

With \quote, fragments of previously entered music may be quoted. `quotedEventTypes` will determine what things are quoted. In this example, a 16th rests is not quoted, since `rest-event` is not in `quotedEventTypes`.

The image shows three staves of music. The top staff is labeled "quoteMe" and contains a melody with a dynamic marking "ff". The middle staff is labeled "orig" and contains the same melody but lacks the "ff" dynamic. The bottom staff is labeled "orig+quote" and contains the melody with the "ff" dynamic included from the quote.

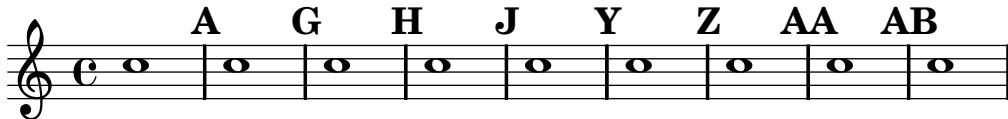

'rehearsal-mark-align.ly'

The rehearsal mark is put on top a breakable symbol, according to the value of `break-align-symbol` value of the `RehearsalMark`. The same holds for `BarNumber` grobs.

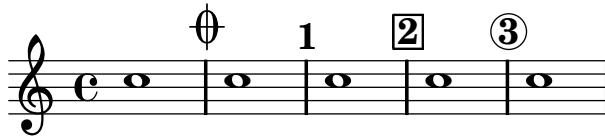

'rehearsal-mark-letter.ly'

Rehearsal marks in letter style: the I is skipped, and after Z, double letters are used. The mark may be set with `\mark NUMBER`, or with `Score.rehearsalMark`.

‘rehearsal-mark-number.ly’

Marks can be printed as numbers. By setting `markFormatter` we may choose a different style of mark printing. Also, marks can be specified manually, with a markup argument.

‘repeat-fold.ly’

Folded repeat may not make sense without alternatives, and there should not be more alternatives than repeats.

‘repeat-line-break.ly’

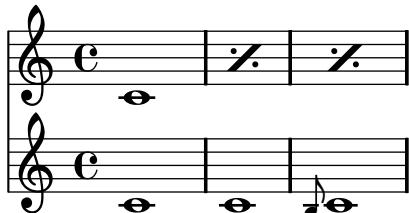

Across linebreaks, the left edge of a first and second alternative bracket should be equal.

‘repeat-percent-count.ly’

Percent repeats get incremental numbers when `countPercentRepeats` is set, to indicate the repeat counts, but only if there are more than two repeats.

‘repeat-percent-grace.ly’

Percent repeats are also centered when there is a grace note in a parallel staff.

‘repeat-percent-skipbars.ly’

Percent repeats are not skipped, even when `skipBars` is set.

‘repeat-percent.ly’

Measure repeats may be nested with beat repeats.

‘repeat-slash.ly’

Within a bar, beat repeats denote that a music snippet should be played again.

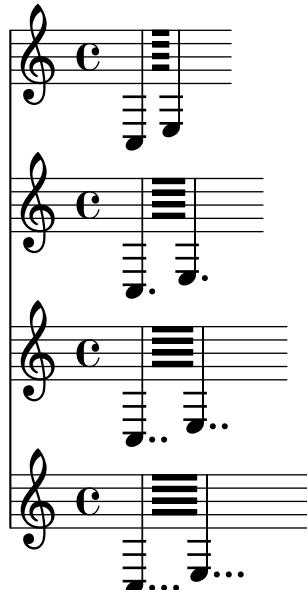

‘repeat-tie.ly’

Repeat ties are only connected on the right side to a note head.

'repeat-tremolo-beams.ly'

Each of the staves here should have four tremolo beams.

'repeat-tremolo-dots.ly'

Dots are added to tremolo notes if the durations involved require them.

'repeat-unfold-all.ly'

Volta repeats may be unfolded through the music function \unfoldRepeats.

A staff in common time (C) showing a volta repeat sign. The first measure consists of a single eighth note. The second measure consists of two eighth notes. The third measure consists of three eighth notes. The fourth measure consists of four eighth notes. The fifth measure consists of five eighth notes. The sixth measure consists of six eighth notes.

'repeat-unfold-tremolo.ly'

Unfolding tremolo repeats. All fragments fill one measure with 16th notes exactly.

Two staves showing unfolding tremolo repeats. The first staff is in 2/4 time and the second staff is in 3/4 time. Both staves consist of eight measures each, filled with 16th notes.

'repeat-unfold.ly'

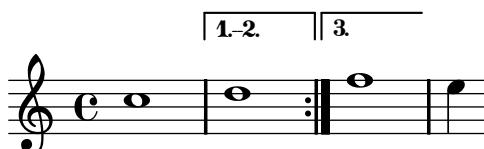

LilyPond has three modes for repeats: folded, unfolded and semi-unfolded. Unfolded repeats are fully written out. Semi unfolded repeats have the body written and all alternatives sequentially. Folded repeats have the body written and all alternatives simultaneously. If the number of alternatives is larger than the repeat count, the excess alternatives are ignored. If the number of alternatives is smaller, the first alternative is multiplied to get to the number of repeats.

Unfolded behavior:

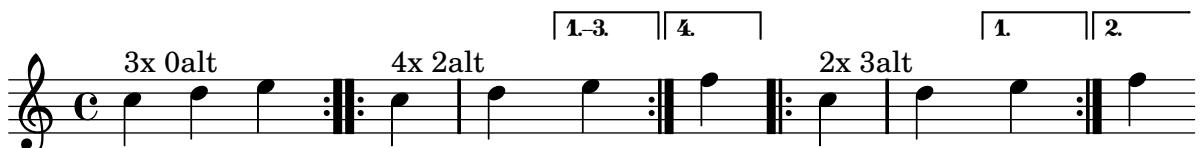

'repeat-volta-skip-alternatives.ly'

When too few alternatives are present, the first alternative is repeated, by printing a range for the 1st repeat.

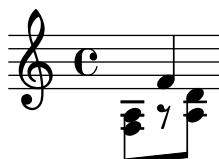

'repeat-volta.ly'

Volta (Semi folded) behavior. Voltas can start on non-barline moments. If they don't barlines should still be shown.

'rest-collision-beam-note.ly'

Beam/rest collision resolution and normal rest/note collisions can be combined.

'rest-collision-beam-quantized.ly'

Rests under beams moved by whole staff spaces.

'rest-collision-beam-restdir.ly'

Beam/rest collision takes offset due to Rest #'direction into account properly.

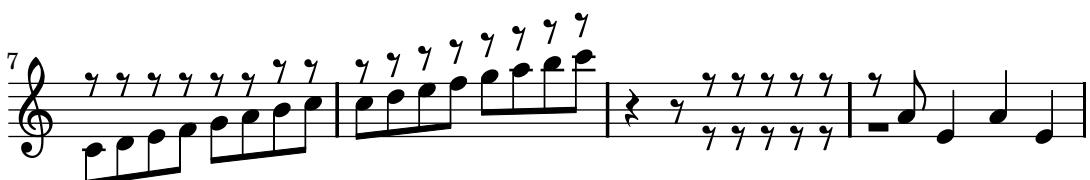

'rest-collision-beam.ly'

Rests under beams are shifted upon collision.

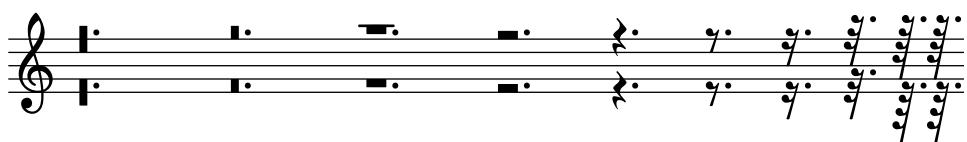

'rest-collision.ly'

Rests should not collide with beams, stems and noteheads. Rests may be under beams. Rests should be move by integral number of spaces inside the staff, and by half spaces outside. Notice that the half and whole rests just outside the staff get ledger lines in different cases.

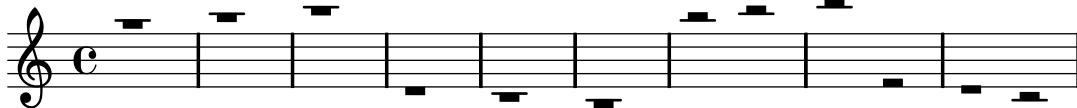

'rest-dot-position.ly'

Dots of rests should follow the rest positions.

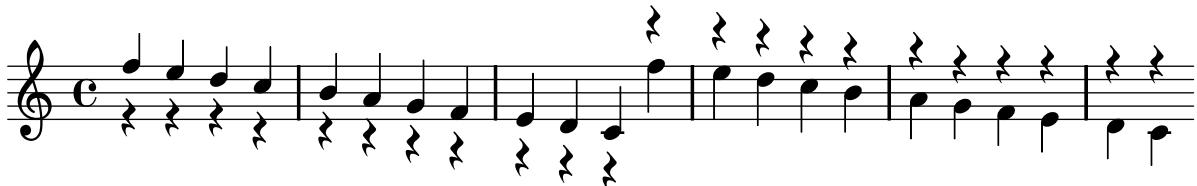

'rest-ledger.ly'

Whole and half rests moving outside the staff should get ledger lines.

'rest-note-collision.ly'

In rest-note collisions, the rest moves in discrete steps, and inside the staff, it moves in whole staff spaces.

'rest-pitch.ly'

Rests can have pitches—these will be affected by transposition and relativization. If a rest has a pitch, rest/rest and beam/rest collision resolving will leave it alone.

'rest-pitched-beam.ly'

Pitched rests under beams.

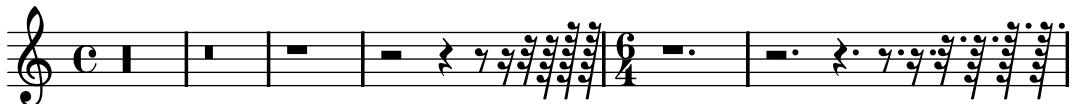

'rest-polyphonic.ly'

In polyphonic situations, rests are moved down even if there is no opposite note or rest. The amount is two staff-spaces.

'rest.ly'

There is a big variety of rests. Note that the dot of 8th, 16th and 32nd rests rest should be next to the top of the rest. All rests except the whole rest are centered on the middle staff line.

'rhythmic-staff.ly'

In rhythmic staves stems should go up, and bar lines have the size for a 5 line staff. The whole rest hangs from the rhythmic staff.

'score-text.ly'

Markup texts are rendered above or below a score.

High up above

My first Li - ly song,

Not much can go wrong!

2. My next Li-ly verse
Now it's getting worse!

3. My last Li-ly text
See what will be next!

`'script-collision.ly'`

Scripts are put on the utmost head, so they are positioned correctly when there are collisions.

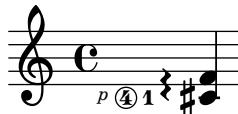

`'script-horizontal-slur.ly'`

Horizontal scripts don't have `avoid-slur` set.

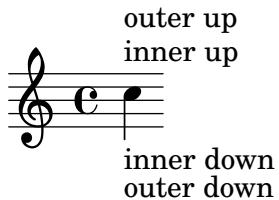

`'script-stack-horizontal.ly'`

horizontal scripts are ordered, so they do not overlap. The order may be set with `script-priority`.

`'script-stack-order.ly'`

Scripts can be stacked. The order is determined by a priority field, but when objects have the same priority, the input order determines the order. Objects specified first are closest to the note.

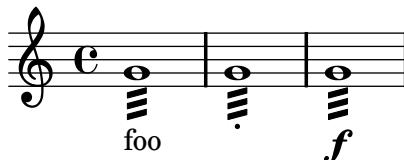

`'script-stacked.ly'`

Scripts may be stacked.

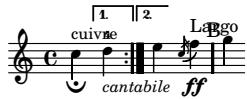

`'script-stem-tremolo.ly'`

Scripts avoid stem tremolos even if there is no visible stem.

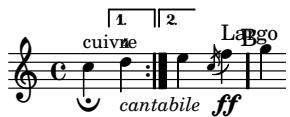

'size11.ly'

Different text styles are used for various purposes.

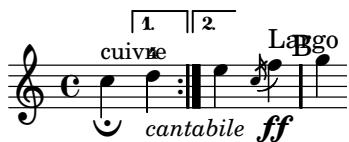

'size13.ly'

Different text styles are used for various purposes.

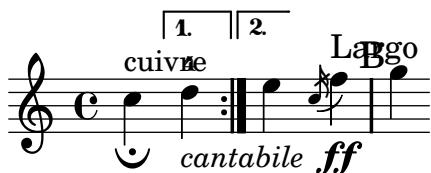

'size16.ly'

Different text styles are used for various purposes.

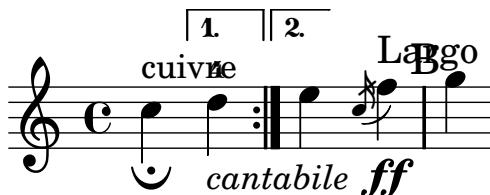

'size20.ly'

Different text styles are used for various purposes.

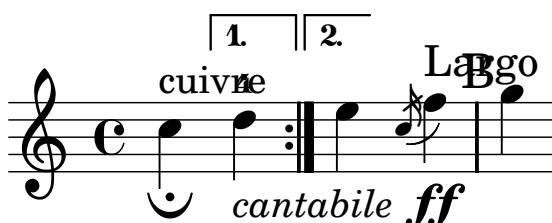

'size23.ly'

Different text styles are used for various purposes.

'size26.ly'

Different text styles are used for various purposes.

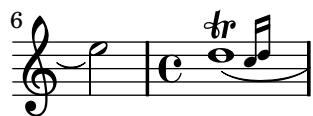

‘skiptypesetting-tuplet.ly’

Tuplet brackets are also skipped with `skipTypesetting`.

‘slur-broken-trend.ly’

Across line breaks, slurs behave nicely. On the left, they extend to just after the preferatory matter, and on the right to the end of the staff. A slur should follow the same vertical direction it would have in unbroken state.

'slur-clef.ly'

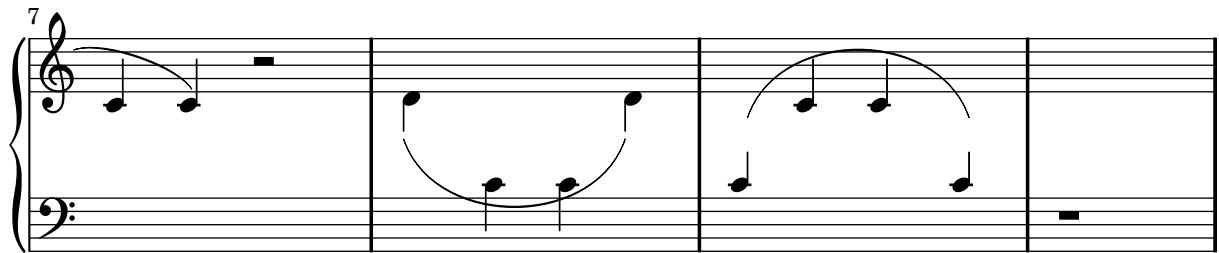

Slurs avoid clefs, but don't avoid barlines.

'slur-cross-staff.ly'

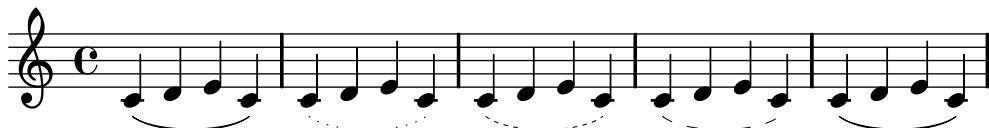

Slurs behave decently when broken across a linebreak.

A musical score for two staves. The top staff is in treble clef and the bottom staff is in bass clef, both in common time. The score consists of six measures separated by vertical barlines. Slurs are used to connect notes across these barlines, demonstrating how they behave when broken at a linebreak. The notes are primarily eighth notes and sixteenth notes.

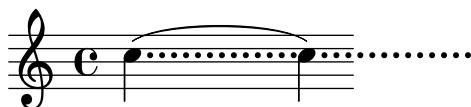

'slur-dash.ly'

The appearance of slurs may be changed from solid to dotted or dashed.

'slur-dots.ly'

Slurs should not get confused by augmentation dots. With a lot of dots, the problems becomes more visible.

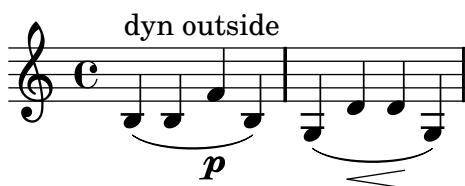

'slur-double.ly'

Some composers use slurs both above and below chords. This can be typeset by setting `doubleSlurs`

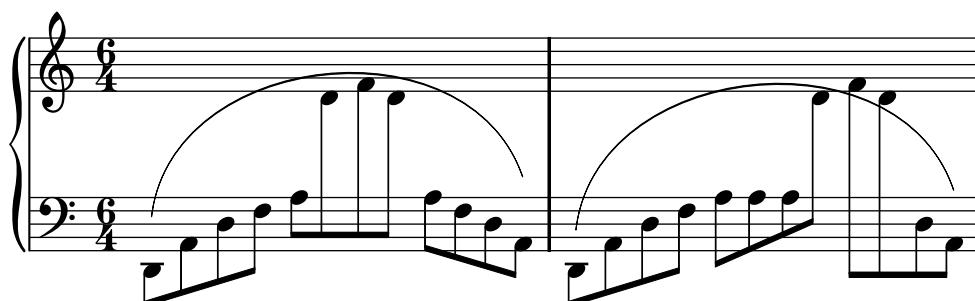

'slur-dynamics.ly'

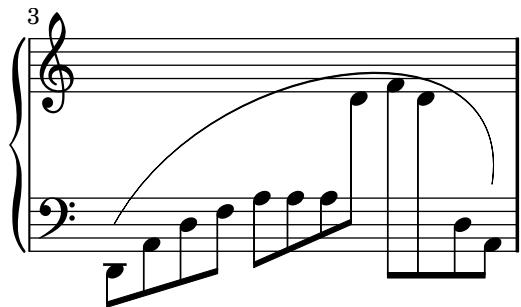

Dynamics avoid collision with slur.

'slur-extreme.ly'

Extreme slurs are scaled to fit the pattern, but only symmetrically. Asymmetric slurs are created by setting `eccentricity`.

'slur-manually'

Setting positions overrides the automatic positioning of the slur. It selects the slur configuration closest to the given pair.

'slur-nicely'

Slurs should look nice and symmetric. The curvature may increase only to avoid noteheads, and as little as possible. Slurs never run through noteheads or stems.

'slur-rest.ly'

Slurs may be placed over rest. The slur will avoid colliding with the rest.

'slur-scoring.ly'

Slur formatting is based on scoring. A large number of slurs are generated. Each esthetic aspect gets demerits, the best configuration (with least demerits) wins. This must be tested in one big file, since changing one score parameter for one situation may affect several other situations.

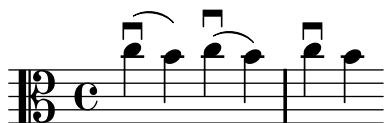

Tunable parameters are in '`scm/slur.scm`'.

'slur-script-inside.ly'

Slurs avoid scripts with `avoid-slur` set to `inside`, scripts avoid slurs with `avoid-slur` set to `around`. Slurs and scripts keep a distance of `slur-padding`.

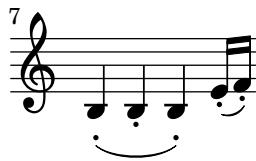

'slur-script.ly'

A slur avoids collisions with scripts. Articulations go inside the slur, dynamic markings go outside the slur. Fingerings and texts are placed either inside or outside.

For different configurations, the defaults can be changed, and scripts can be moved manually.

Musical staff: A treble clef staff with a key signature of one flat. It shows a slur over two notes followed by a script over three notes, then another slur over two notes. Below the staff, fingerings are shown: 1 3, 2 4, 3 5. Dynamic markings include `p`, `p f`, and `cresc.`. Text annotations above the staff indicate different configurations: "dyn outside", "dyn around", and "no avoid".

'slur-symmetry-1.ly'

Symmetric figures should lead to symmetric slurs.

'slur-symmetry.ly'

Symmetric figures should lead to symmetric slurs.

'slur-tilt.ly'

The attachment point for strongly sloped slurs is shifted horizontally slightly. Without this correction, slurs will point into one note head, and point over another note head.

'slur-tuplet.ly'

TupletNumber grobs are always inside slurs. This may not work if the slur starts after the tuplet.

'spacing-accidental-staffs.ly'

Accidentals in different staves do not affect the spacing of the eighth notes here.

‘spacing-accidental-stretch.ly’

Accidentals do not influence the amount of stretchable space. The accidental does add a little non-stretchable space.

‘spacing-accidental.ly’

Accidentals sticking out to the left of a note will take a little more space, but only if the spacing is tight.

‘spacing-bar-stem.ly’

Downstem notes following a barline are printed with some extra space. This is an optical correction similar to juxtaposed stems.

Accidentals after the barline get some space as well.

‘spacing-clef-first-note.ly’

Clef changes at the start of a line get much more space than clef changes halfway the line.

‘spacing-end-of-line.ly’

Broken engraving of a bar at the end of a line does not upset the space following rests and notes.

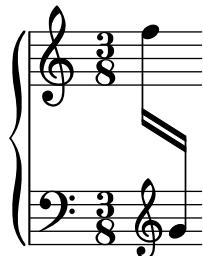

‘spacing-ended-voice.ly’

A voicelet (a very short voice to get polyphonic chords correct) should not confuse the spacing engine.

‘spacing-folded-clef-cross-staff.ly’

Clefs are also folded under cross staff constructs.

‘spacing-folded-clef.ly’

A clef can be folded below notes in a different staff, if this does not disrupt the flow of the notes.

‘spacing-folded-clef2.ly’

A clef can be folded below notes in a different staff, if there is space enough. With Paper_column stencil callbacks we can show where columns are in the score.

‘spacing-grace-duration.ly’

Spacing uses the duration of the notes, but disregards grace notes for this. In this example, the 8ths around the grace are spaced exactly as the other 8th notes.

`'spacing-grace.ly'`

Grace note runs have their own spacing variables in `Score.GraceSpacing`. So differing grace note lengths inside a run are spaced accordingly.

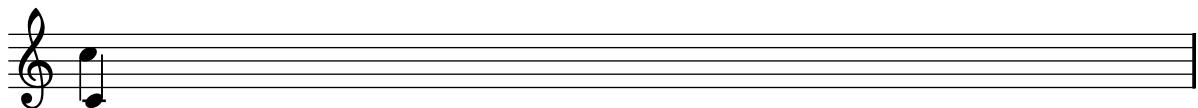

`'spacing-knee.ly'`

For knees, the spacing correction is such that the stems are put at regular distances. This effect takes into account the width of the note heads and the thickness of the stem.

`'spacing-loose-grace-linebreak.ly'`

If a floating grace spacing section attaches to a note across a line break, it gets attached to the end of line.

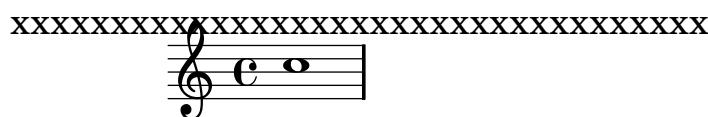

`'spacing-loose-grace.ly'`

With `strict-grace-spacing`, grace notes don't influence spacing.

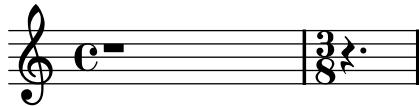

`'spacing-mark-width.ly'`

Width of marks does not affect spacing.

‘spacing-measure-length.ly’

Horizontal spacing is bounded by of the current measure length. This means that the 3/8 setting does not affect the whole rest spacing.

‘spacing-multi-tuplet.ly’

Concurrent tuplets should be equidistant on all staves. Such equidistant spacing is at odds with elegant engraver spacing; hence it must be switched on explicitly with the `uniform-stretching` property of `SpacingSpanner`.

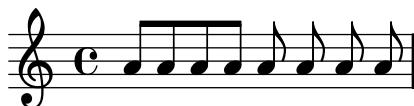

‘spacing-no-note.ly’

In the absence of NoteSpacings, wide objects still get extra space. In this case, the slash before the barline gets a little more space.

‘spacing-note-flags.ly’

The flags of 8th notes take some space, but not too much: the space following a flag is less than the space following a beamed 8th head.

‘spacing-proportional.ly’

Proportional notation can be created by setting `proportionalNotationDuration`. Notes will be spaced proportional to the distance for the given duration.

`'spacing-ragged-last.ly'`

If `raggedlast` is set, the systems are broken similar to paragraph formatting in text: the last line is unjustified.

11

A continuation of the musical staff from measure 11. It shows ten more quarter notes, maintaining the same even spacing as the previous staff, illustrating the 'ragged-last' effect for the entire section.

`'spacing-rest.ly'`

Rests get a little less space, since they are narrower. However, the quarter rest in feta font is relatively wide, causing this effect to be very small.

`'spacing-section.ly'`

New sections for spacing can be started with `ewSpacingSection`. In this example, a section is started at the 4/16, and a 16th in the second section takes as much space as a 8th in first section.

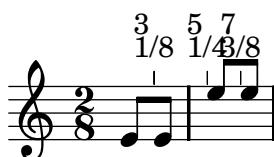

`'spacing-short-notes.ly'`

Notes that are shorter than the common shortest note get a space (i.e. without the space needed for the note) proportional to their duration. So, the 16th notes get 1/2 of the space of an eighth note. The total distance for a 16th (which includes note head) is 3/4 of the eighth note.

`'spacing-stem-bar.ly'`

Upstem notes before a barline are printed with some extra space. This is an optical correction similar to juxtaposed stems.

'spacing-stem-direction.ly'

There are optical corrections to the spacing of stems. The overlap between two adjacent stems of different direction is used as a measure for how much to correct.

'spacing-stem-same-direction.ly'

For juxtaposed chords with the same direction, a slight optical correction is used. It is constant, and works only if two chords have no common head-positions range.

'spacing-stick-out.ly'

If `keep-inside-line` is set for the relevant `PaperColumn`, LilyPond will space a line to prevent text sticking out of the right margin.

This is a really long text

'spacing-strict-notespacing.ly'

If `strict-note-spacing` is set, then spacing of notes is not influenced by bars and clefs half-way on the system. Rather, they are put just before the note that occurs at the same time. This may cause collisions.

'spacing-strict-spacing-grace.ly'

With `strict-note-spacing` spacing for grace notes (even multiple ones), is floating as well.

`'spacing-to-grace.ly'`

Space from a normal note (or barline) to a grace note is smaller than to a normal note.

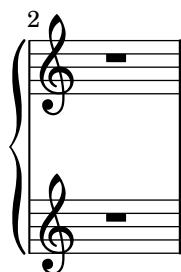

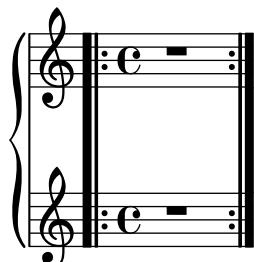

`'spacing-uniform-stretching.ly'`

Notes are spaced exactly according to durations, if `uniform-stretching` is set. Accidentals are ignored, and no optical-stem spacing is performed.

Two staves in common time (indicated by 'C') and treble clef. The top staff has a uniform duration for each note. The bottom staff shows a different duration for each note, with a '7' below it indicating a seven-note span. This demonstrates how notes are spaced according to their durations when `uniform-stretching` is applied.

`'span-bar-break.ly'`

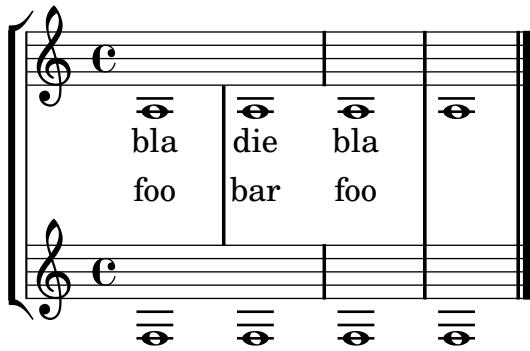

At the beginning of a system, the `|:` repeat barline is drawn between the staves, but the `:|` is not.

`'span-bar.ly'`

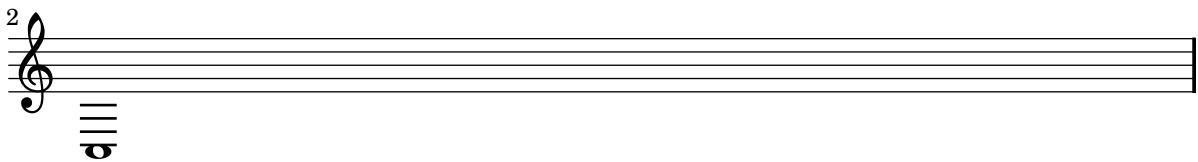

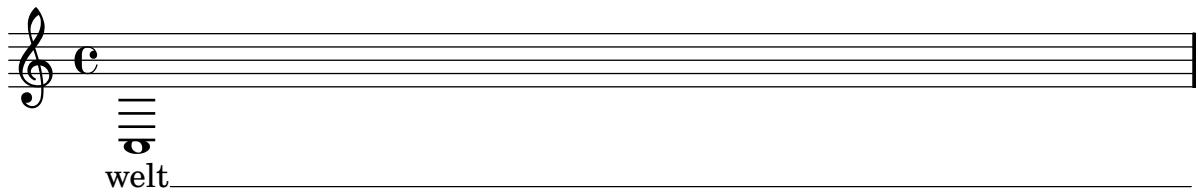

Span bars are drawn only between staff bar lines. By setting bar lines to transparent, they are shown only between systems.

Setting `SpanBar` transparent removes the barlines between systems.

'spanner-break-beyond-parent.ly'

Spanners parts that extend beyond their parents are killed in case of line breaks.

'spanner-break-overshoot.ly'

The **break-overshoot** property sets the amount that a spanner (in this case: the beam) in case of a line break extends beyond the rightmost column and extends to the left beyond the prefatory matter.

'staccato-pos.ly'

Some scripts must have quantized positions. VErtical position descend monotonously for a descending scale. The staccato dot is close to the notehead. If the head is in a space, then the dot is in the space next to it.

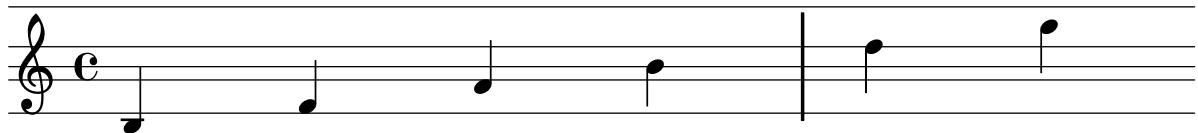

'staff-halfway.ly'

Staves can be started and stopped at command.

'staff-line-positions.ly'

The vertical positions of staff lines may be specified individually, by setting the `line-positions` property of the `StaffSymbol`.

'staff-mixed-size.ly'

Staves may be present in several sizes within a score. This is achieved with an internal scaling factor. If the scaling factor is forgotten in some places, objects generally become too thick or too large on smaller staves.

'staff-tweak.ly'

The staff is a grob (graphical object) which may be adjusted as well, for example, to have 6 thick lines and a slightly large `staff-space`. However, beams remain correctly quantized.

'stanza-number.ly'

Stanza numbers are put left of their lyric. They are aligned in a column.

1. Foo
2. FFFooooo

'stem-direction-context.ly'

Stem directions for notes on the middle staff line are determined by the directions of their neighbors.

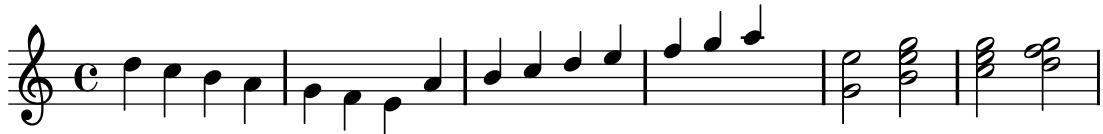

'stem-direction.ly'

Stems, beams, ties and slurs should behave similarly, when placed on the middle staff line. Of course stem-direction is down for high notes, and up for low notes.

'stem-shorten.ly'

If note head is 'over' the center line, the stem is shortened. This happens with forced stem directions, and with some chord configurations.

'stem-stemlet.ly'

Stemlets are small stems under beams over rests. Their length can be set with `stemlet-length`.

'stem-tremolo-forced-dir.ly'

'stem-tremolo-position.ly'

Tremolos are positioned a fixed distance from the end of the beam. Tremolo flags are shortened and made rectangular on beamed notes or on stem-up notes with a flag. Tremolo flags are tilted extra on stem-down notes with a flag.

'stem-tremolo-staff-space.ly'

stem tremolo vertical distance also obeys staff-space settings.

'stem-tremolo.ly'

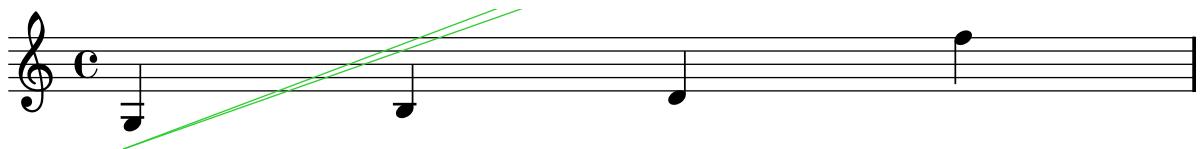

Stem tremolos or rolls are tremolo signs that look like beam segments crossing stems. If the stem is in a beam, the tremolo must be parallel to the beam. If the stem is invisible (e.g. on a whole note), the tremolo must be centered on the note. If the note has a flag (eg. an unbeamed 8th note), the tremolo should be shortened if the stem is up and tilted extra if the stem is down.

The tremolos should be positioned a fixed distance from the end of the stems unless there is no stem, in which case they should be positioned a fixed distance from the note head.

The first part shows a staff with various note heads and stems, each followed by a tremolo sign. Above the staff, time signatures are listed: :4, :8, :16, :32, x, :. The second part shows a staff numbered 11, containing a continuous sequence of eighth notes with stems and tremolo signs.

'stencil-color-rotation.ly'

Combinations of rotation and color do work.

'stencil-hacking.ly'

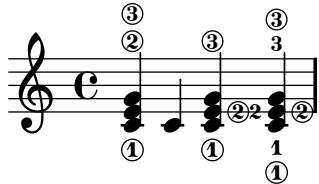

You can write stencil callbacks in Scheme, thus providing custom glyphs for notation elements. A simple example is adding parentheses to existing stencil callbacks.

The parenthesized beam is less successful due to implementation of the Beam. The note head is also rather naive, since the extent of the parens are also not seen by accidentals.

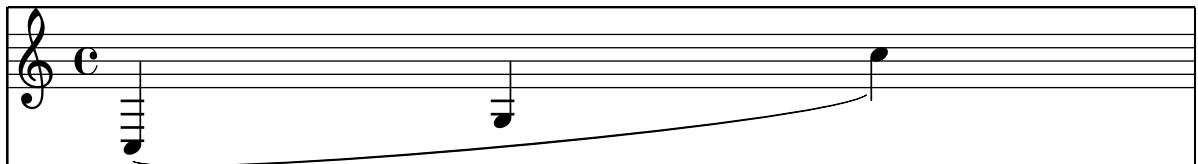

`'string-number.ly'`

String numbers can be added to chords. They use the same positioning mechanism as finger instructions.

`'system-extents.ly'`

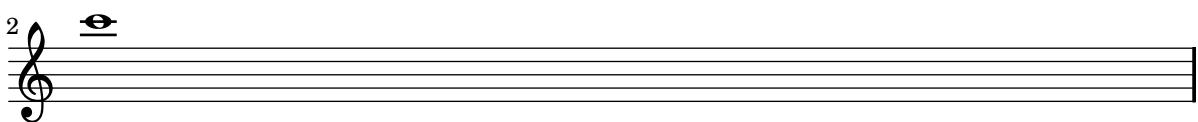

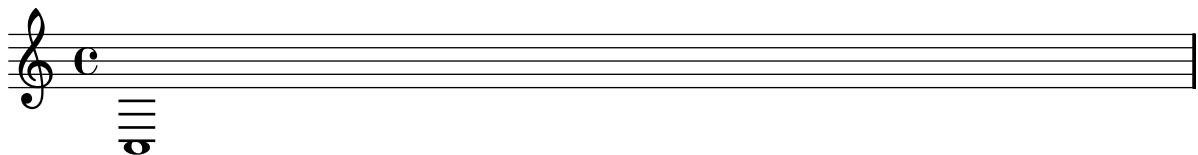

The size of every system is correctly determined; this includes postscript constructs such as slurs.

`'system-overstrike.ly'`

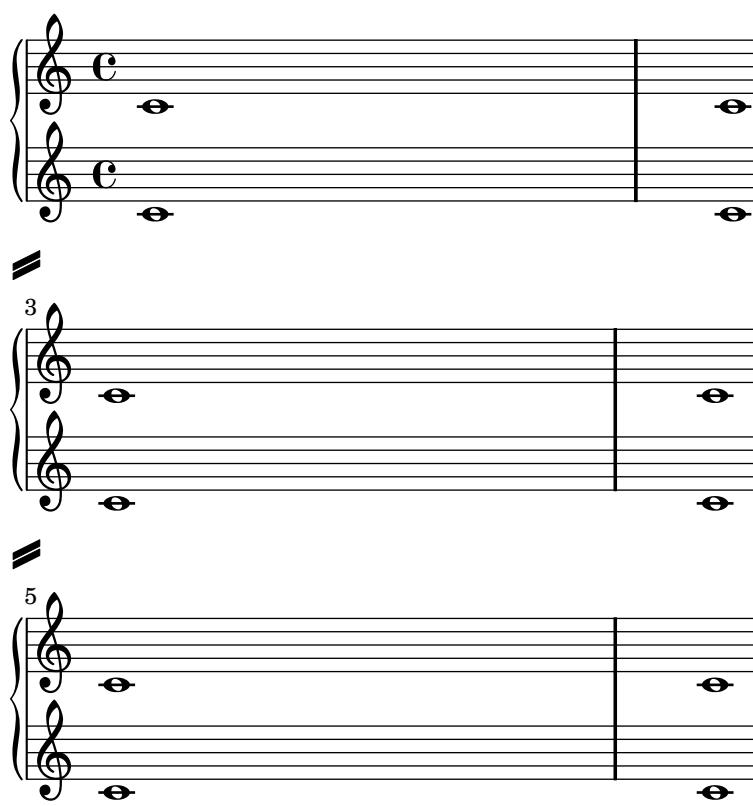

By setting between-system-padding to a negative value, it is possible to eliminate the anti-collision constraints. Then setting `between-system-space` to a low (nonzero) value, print systems in overstrike.

Unfortunately, this does not show in the collated texinfo document. Run this example stand-alone to see the effect.

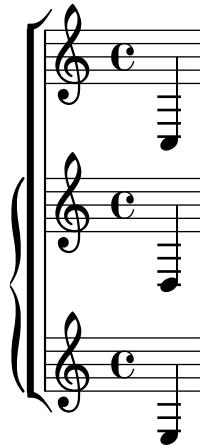

`'system-separator.ly'`

System separators maybe defined as markups in the `systemSeparator` field of the bookpaper block. They are centered between the boundary staves of each system.

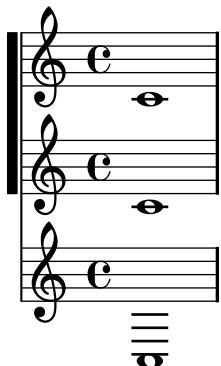

'system-start-bracket.ly'

The piano brace should be shifted horizontally if it is enclosed in a bracket.

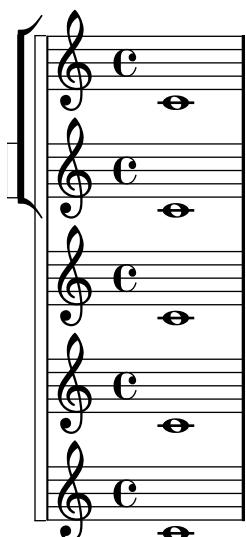

'system-start-heavy-bar.ly'

A heavy-bar system start delimiter may be created by tuning the `SystemStartBar` grob.

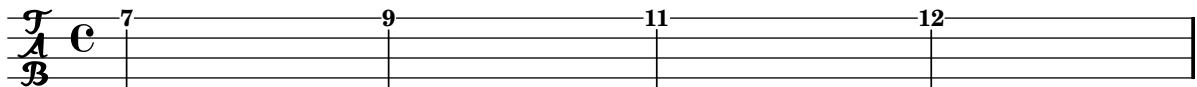

'system-start-nesting.ly'

Deeply nested system braces/brackets/etc. may be created with the `Nested_system_start_delimiter_engraver`

'tablature-string-tunings.ly'

For other tunings, it is sufficient to set `stringTunings`. The number of staff lines is adjusted accordingly.

'tablature.ly'

A sample tablature, with both normal staff and tab.

Tablature is done by overriding the note-head formatting function, and putting it on a 6-line staff. A special engraver takes care of going from string-number + pitch to number.

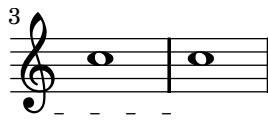

String numbers can be entered as note articulations (inside a chord) and chord articulations (outside a chord)

'tag-filter.ly'

The `\tag` command marks music expressions with a name. These tagged expressions can be filtered out later. This mechanism can be used to make different versions of the same music. In this example, the top stave displays the music expression with all tags included. The bottom two staves are filtered: the part has cue notes and fingerings, but the score has not.

'text-spanner.ly'

Text spanners should not repeat start text when broken.

'tie-arpeggio-collision.ly'

Advanced tie chord formatting also works with arpegiated ties. Due to arpeggios, tie directions may be changed relative to the unarpeggiated case.

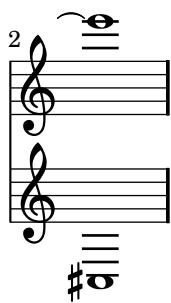

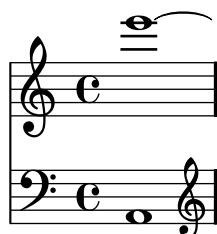

'tie-arpeggio.ly'

when `tieWaitForNote` is set, the right-tied note does not have to follow the left-tied note directly. When `tieWaitForNote` is set to false, any tie will erase all pending ties.

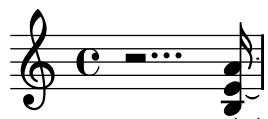

'tie-broken-other-staff.ly'

Broken tie lengths are not affected by clefs in other staves.

'tie-broken.ly'

Ties behave properly at line breaks.

'tie-chord-debug.ly'

Switching on debug-tie-scoring annotates the tie scoring decisions made.

5 (0.25): vdist=3.75 TOTAL=45.14
4 (0.23): vdist=3.63 lhdist=14.51
2 (-0.21): vdist=1.45 lhdist=2.00 rhdist=3.35

'tie-chord-partial.ly'

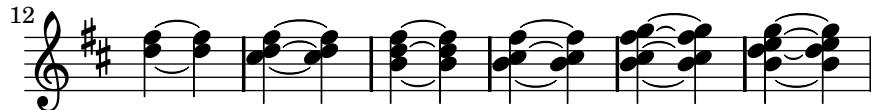

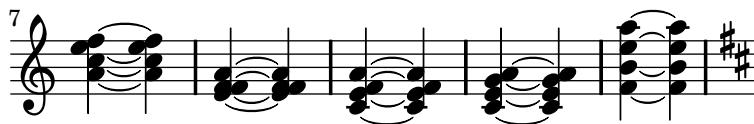

Individual chord notes can also be tied

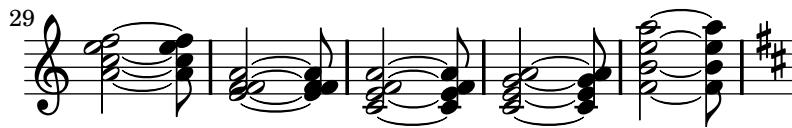

'tie-chord.ly'

In chords, ties keep closer to the note head vertically, but never collide with heads or stems. Seconds are formatted up/down; the rest of the ties are positioned according to their vertical position.

The code does not handle all cases. Sometimes ties will print on top of or very close to each other. This happens in the last chords of each system.

'tie-direction-manually'

Tie directions can be set with `_` and `~`. This makes correction in complex chords easier.

'tie-dot.ly'

Ties avoid collisions with dots.

'tie-grace.ly'

Tieing a grace to the to a following grace or main note works.

'tie-manually'

Tie formatting may be adjusted manually, by setting the `tie-configuration` property. The override should be placed at the second note of the chord.

You can leave a Tie alone by introducing a non-pair value (eg. `#t`) in the `tie-configuration` list.

'tie-semi-single.ly'

Like normal ties, single semities (LaissezVibrerTie or RepeatTie) get their direction from the stem direction, and may be tweaked with `#'direction`.

'tie-single-manually'

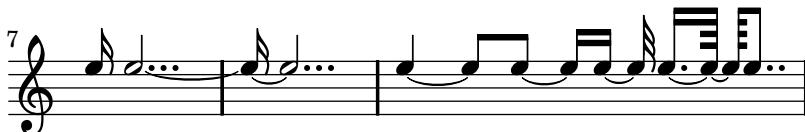

Individual ties may be formatted manually by specifying their `direction` and/or `staff-position`.

'tie-single.ly'

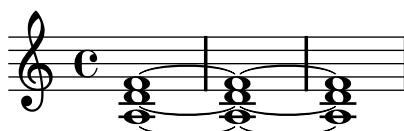

Formatting for isolated ties.

- short ties are in spaces
- long ties cross staff lines
- ties avoid flags of left stems.
- ties avoid dots of left notes.
- short ties are vertically centered in the space, as well those that otherwise don't fit in a space
- extremely short ties are put over the noteheads, instead of inbetween.

'tie-whole.ly'

For whole notes, the inside ties do not cross the center of the note head, horizontally.

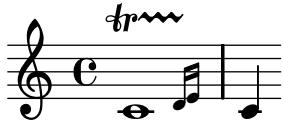

'trill-spanner-pitched.ly'

Pitched trills are denoted by a small note head in parentheses following the main note. This note head is properly ledgered, and parentheses include the accidental.

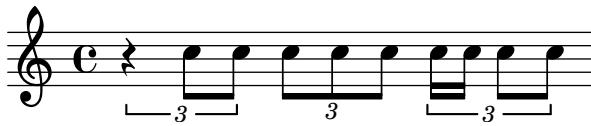

‘trill-spanner.ly’

Trill spanner

‘tuplet-beam.ly’

In combination with a beam, the bracket of the tuplet bracket is removed. This only happens if there is one beam, as long as the bracket.

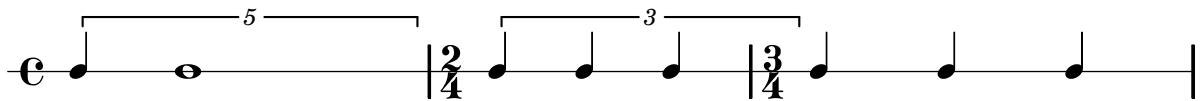

‘tuplet-broken.ly’

Broken tuplets are adorned with little arrows. The arrows come from the `edge-text` property, and thus be replaced with larger glyphs or other text.

‘tuplet-full-length-note.ly’

tuplet can be made to run to prefatory matter or the next note, by setting `tupletFullLengthNote`.

‘tuplet-full-length.ly’

If `tupletFullLength` is set, tuplets end at the start of the next non-tuplet note.

'tuplet-gap.ly'

The size of the tuplet bracket gap is adjusted to the width of the text.

'tuplet-nest-beam.ly'

Nested tuplets do collision resolution, also when they span beams.

'tuplet-nest.ly'

Tuplets may be nested.

'tuplet-properties.ly'

Tuplet bracket formatting supports numerous options, for instance, bracketed (B) and non-bracketed (NB).

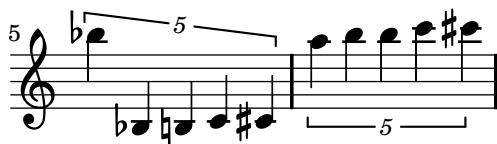

'tuplet-rest.ly'

Tuplets may contain rests.

'tuplet-slope.ly'

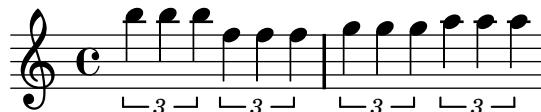

Tuplet brackets stay clear of the staff. The slope is determined by the graphical characteristic of the notes, but if the musical pattern does not follow graphical slope, then the bracket is horizontal

The bracket direction is determined by the dominating stem direction.

'tuplet-staffline-collision.ly'

Horizontal tuplet brackets are shifted vertically to avoid staff line collisions.

'tuplets.ly'

Tuplets are indicated by a bracket with a number. There should be no bracket if there is a beam exactly matching the length of the tuplet. The bracket does not interfere with the stafflines, and the number is centered in the gap in the bracket.

The bracket stops at the end of the stems, if the stems have the same direction as the bracket. The endings can be adjusted with `bracket-flare`.

'utf-8-mixed-text.ly'

words in mixed font in a single string are separated by spaces as in the input string. Here a Russian word followed by a roman word.

Здравствуйт Hallo

‘utf-8.ly’

Various scripts may be used for texts (like titles and lyrics) introduced by entering them in UTF-8 encoding, and using a Pango based backend. Depending on the fonts installed, this fragment will render Bulgarian (Cyrillic), Hebrew, Japanese and Portuguese.

Жълтата дюля беше щастлива, че пухът,
זה כי סתם לשות איר תנץ
いろはにはへど ちりぬるを わがよたれぞ つねならむ うゐのおくやまけふこえて
à vo - cê uma can - ção

който
קרפַּד
あさきゆめみじ
legal

‘voice-follower.ly’

Whenever a voice switches to another staff a line connecting the notes can be printed automatically. This is enabled if the property `followVoice` is set to true.

‘volta-broken-left-edge.ly’

Broken volta spanners behave correctly at their left edge in all cases.

‘volta-multi-staff.ly’

By setting `voltaOnThisStaff`, repeats can be put also over other staves than the topmost one in a score.

The image shows two staves of musical notation. Each staff has a treble clef and a key signature of C. The first staff has two measures: measure 1 contains two eighth notes, and measure 2 contains one eighth note followed by a colon. The second staff is identical. Both staves are enclosed in a large brace on the left.

'whiteout.ly'

The whiteout command underlays a white box under a markup. The whitening effect only is only guaranteed for staff lines, since staff lines are in a different layer.

A single staff of musical notation with a treble clef and a key signature of C. It contains a quarter note, a label 'foo:' below it, and a vertical bar at the end of the staff.
